Warnings, Cautions, and Others

Mises en garde, précautions et indications diverses

CAUTION
Changes or modifications not approved by JVC could void the user’s authority to operate the equipment.

For U.S.A
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operation.

For Canada
This Class B digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

For U.S.A
Declaration of Conformity:
Trade Name: JVC
Model Number: RX-D702B
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operation.

For Canada
This Class B digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

For Canada/pour le Canada
Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

L’utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.
Introduction

We would like to thank you for purchasing one of our JVC products. Before operating this unit, read this manual carefully and thoroughly to obtain the best possible performance from your unit, and retain this manual for future reference.

Features

Hybrid Feedback Digital Amplifier
RX-D702B features the JVC-exclusive Hybrid Feedback Digital Amplifier. Premium-grade parts and devices, and special internal construction assure you will enjoy superior sound.

USB WIRELESS
By using the USB wireless transmitter supplied with RX-D702B, sound reproduced from your PC can be transmitted to this receiver. You can choose PC as another playback source for RX-D702B.

Compatible with HDMI*
The HDMI (High Definition Multimedia Interface) is the standard interface for the next-generation TV. By connecting the source components, this receiver, and TV with the HDMI cables, digital video signals and audio signals (including Dolby Digital, DTS) are transmitted through the cables. You can enjoy digital video and sound without AD/DA conversion with easy connection. As RX-D702B supports up to HDMI version 1.1, this receiver can digitally transmit 5.1-channel PCM with sampling rates of 96 kHz and 2-channel PCM with sampling rates of 192 kHz. (These PCM signals are referred to as “multi channel PCM” in this instruction.) You can enjoy digital sound without deterioration. In addition, this receiver is compatible with HDCP** (High-Bandwidth Digital Content Protection), and HDCP contents can be viewed if you connect a HDCP-compatible TV to this receiver.

* HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC.
** HDCP is the abbreviation of “High-Bandwidth Digital Content Protection,” and is the high-reliable copy control technology licenced by Digital Content Protection, LLC.

7.1 channel DAP (Digital Acoustic Processor)
Sound field simulation technology allows precise ambience recreation of existing theaters and halls. Thanks to the high-performance DSP (Digital Signal Processor) and high-capacity memory, you can enjoy 7.1-channel surround by playing 2-channel or multi-channel software.

K2 Technology
K2 technology has been designed to enable natural audio reproduction, achieving a drastic reduction in digital distortion and creating original sound ambience with high precision.

CC (Compression Compensative) Converter
CC Converter eliminates jitter and ripples, achieving a drastic reduction in digital distortion by processing the digital music data in 24-bit quantization and by expanding the sampling frequency to 128 kHz (for fs 32 kHz signals)/176.4 kHz (for fs 44.1 kHz signals)/192 kHz (for fs 48 kHz signals). By using the CC Converter, you can obtain a natural sound field from any source.

DCDi technology
DCDi (Directional Correlational Deinterlacing) technology, developed by Faroudja, eliminates jagged edges generated in progressive scan conversion. With DCDi, you can enjoy clear and smooth video images on your display. For RX-D702B, this function is applied only when the NTSC analog video signals are transmitted to the receiver.

Precautions

Power sources
• When unplugging the receiver from the wall outlet, always pull the plug, not the AC power cord.
• Do not handle the AC power cord with wet hands.
• If you are not going to operate the receiver for an extended period of time, unplug the AC power cord from the wall outlet.

Ventilation
The seven high power amplifiers built in this receiver will generate heat inside the cabinet. For safety, observe the following carefully:
• Make sure there is good ventilation around the receiver. Poor ventilation could overheat and damage the receiver.
• Do not block the ventilation openings or holes. (If the ventilation openings or holes are blocked by a newspaper or cloth, etc., the heat may not be able to get out.)

Others
• Should any metallic object or liquid fall onto the unit, unplug the unit and consult your dealer before operating any further.
• Do not use this receiver in a bathroom or places with water.
• Do not place any containers filled with water or liquids (such as cosmetics or medicines, flower vases, potted plants, cups, etc.) on top of this receiver.
• Do not disassemble the unit since there are no user serviceable parts inside.

If anything goes wrong, unplug the AC power cord and consult your JVC dealer.

Remote control

See pages in parentheses for details.

1. TV/VIDEO button (48, 50)
   - TV/VIDEO button (48, 50)
2. Standby/on buttons (19, 48 – 52)
   - TV/VIDEO button (48, 50)
3. Source selecting buttons (19, 39, 48 – 52)
   - TV, DVR/DVD, TV, DBS, DVR/DVD
4. TV VOL (volume) +/– button (48, 50)
5. CHANNEL +/- button* (48 – 52)
6. Operating buttons for video components* (48, 49, 51, 52)
   - MUTING, MEMORY, TUNING/REW
7. Setting button (25, 27)
8. Cursor buttons (5, 8, 10, 13) (25, 27, 33, 35)
9. ADJUST button (33, 35)
10. VIDEO INPUT button (20)
11. AUDIO INPUT button (20)
12. DECODE MODE button (21)
13. SURROUND button (30, 45)
14. Adjusting buttons for Digital Equalizer (37)
   - D.EQ FREQ, D.EQ LEVEL +/–
15. CC CONVERTER button (22)
16. Adjusting buttons for Surround/DSP modes’ parameters
   - C (center), TONE, EFFECT (37, 38)
17. Adjusting buttons for speaker and subwoofer output levels (36)
   - FRONT L +/-, FRONT R +/-, CENTER +/-, SUBWOOFER +/-, SURR L +/-, SURR R +/-, S.BACK L +/-, S.BACK R +/-
18. VOLUME +/- button (20)
19. DVR/DVD mode selector* (49, 52)
20. MUTING button (21)
21. • DVD MENU button* (49, 52)
22. • DISP button (48)
23. EXIT button (25, 29, 33, 35)
24. • Numeric buttons* (40, 42, 48 – 52)
   - 1 – 10, 0, +10, 100+
25. • BAND button (48)
26. • PREV button (48)
27. • RETURN button (48)
28. • FM MODE button (40)
29. DIMMER button (21)
30. MEMORY button (93, 40)
31. SLEEP button (22)
32. MIDNIGHT button (31)
33. • SMART S (surround), SETUP button (23, 24)
34. TEST button (36)

* These buttons can be used for operating a JVC DVD recorder or DVD player with the mode selector set to “DVR” or “DVD” (see page 49).

If these buttons do not function normally, use the remote control supplied with your DVD recorder or DVD player. Refer also to the manuals supplied with the DVD recorder or DVD player for details.

- When operating a DVD recorder (for JVC products ONLY), set the mode selector (19) to “DVR.”
- When operating a DVD player, set the mode selector (19) to “DVD.”
See pages in parentheses for details.

   - Optical: 3(VCR)
5. DIGITAL OUT terminal (16)
6. • USB WIRELESS ANTENNA terminal (17)
   - • USB WIRELESS lamp (17)
7. ANTENNA terminals (7)
8. SUBWOOFER OUT jack (8)
9. VIDEO jacks (10 – 14)
   - VIDEO (composite video) jacks, S-VIDEO jacks
   - • Input: DBS IN, VCR IN (PLAY), DVR/DVD IN (PLAY)
   - • Output: VCR OUT (REC), DVR OUT (REC), MONITOR OUT
10. COMPONENT VIDEO (Y, PB, PR) jacks (10 – 14)
   - VCR(DBS) IN, DVR/DVD IN, MONITOR OUT
11. AUDIO jacks (10 – 14)
   - • Input: TV/SIRIUS IN, DBS IN, VCR IN (PLAY), DVR/DVD IN (PLAY)
   - • Output: VCR OUT (REC), DVR OUT (REC)
12. DVD MULTI IN jacks (12)
   - CENTER, SUBWOOFER, SURR – L, SURR – R
13. Speakers terminals (8)
   - SURROUND BACK SPEAKERS, SURROUND SPEAKERS, CENTER SPEAKER, FRONT SPEAKERS
Getting started

Before Installation

General precautions
- Be sure your hands are dry.
- Turn the power off to all components.
- Read the manuals supplied with the components you are going to connect.

Locations
- Install the receiver in a location that is level and protected from moisture and dust.
- The temperature around the receiver must be between –5°C and 35°C (23°F and 95°F).
- Make sure there is good ventilation around the receiver. Poor ventilation could cause overheating and damage the receiver.
- Leave sufficient distance between the receiver and the TV.

Handling the receiver
- Do not insert any metal object into the receiver.
- Do not disassemble the receiver or remove screws, covers, or cabinet.
- Do not expose the receiver to rain or moisture.
- Do not pull on the power cord to unplug the cord. When unplugging the cord, always grasp the plug so as not to damage the cord.
- When you are away on travel or otherwise for an extended period or time, remove the plug from the wall outlet. A small amount of power is always consumed while the power cord is connected to the wall outlet.

The receiver has a built-in cooling fan which operates while the receiver is turned on. Be sure to leave enough ventilation to obtain sufficient cooling effect.

CAUTION:
- Do not connect the AC power plug to the wall outlet until all connections are completed.

Checking the supplied accessories

Check to be sure you have all of the following supplied accessories. If anything is missing, contact your dealer immediately.

- Remote control (× 1)
- Batteries (× 2)
- AM loop antenna (× 1)
- FM antenna (× 1)
- USB wireless antenna (× 1)
- USB wireless transmitter (Model number: QAL0708-001) (× 1)
- USB extension cable (60 cm) (× 1)

Putting batteries in the remote control

Before using the remote control, put two supplied batteries first.

1 Press and slide the battery cover on the back of the remote control.
2 Insert batteries.
Make sure to match the polarity: (+) to (+) and (–) to (–).
3 Replace the cover.

If the range or effectiveness of the remote control decreases, replace the batteries. Use two R6(SUM-3)/AA(15F) type dry-cell batteries.

- Supplied batteries are for initial setup. Replace for continued use.

CAUTION:
Follow these precautions to avoid leaking or cracking cells:
- Place batteries in the remote control so they match the polarity: (+) to (+) and (–) to (–).
- Use the correct type of batteries. Batteries that look similar may differ in voltage.
- Always replace both batteries at the same time.
- Do not expose batteries to heat or flame.

When using the remote control, aim the remote control directly at the remote sensor on the front panel.
Connecting the FM and AM antennas

Do not connect the AC power plug to the wall outlet until all connections are completed.

**AM loop antenna (supplied)**
Snap the tabs on the loop into the slots of the base to assemble the AM loop antenna.

**FM antenna (supplied)**
If FM reception is poor, connect an outdoor FM antenna (not supplied).

**AM antenna connection**
Connect the AM loop antenna supplied to the AM LOOP terminals.
Connect the white cord to the AM EXT terminal, and connect the black cord to the black terminal.
Turn the loop until you have the best reception.
• If the reception is poor, connect an outdoor single vinyl-covered wire (not supplied) to the AM EXT terminal. Keep the AM loop antenna connected.

**FM antenna connection**
Connect the FM antenna supplied to the FM 75 Ω COAXIAL terminal as a temporary measure.
Extend the supplied FM antenna horizontally.
• If the reception is poor, connect an outdoor FM antenna (not supplied). Before attaching a 75 Ω coaxial cable with a connector, disconnect the supplied FM antenna.

**NOTES**
• If the AM loop antenna wire is covered with vinyl, remove the vinyl while twisting it as shown on the right.
• Make sure the antenna conductors do not touch any other terminals, connecting cords and power cord. This could cause poor reception.
Connecting the speakers

Do not connect the AC power plug to the wall outlet until all connections are completed.

Speaker Layout Diagram

CAUTIONS:
• Use speakers with the SPEAKER IMPEDANCE indicated by the speaker terminals (6 Ω – 16 Ω).
• DO NOT connect more than one speaker to one speaker terminal.

Connecting the speakers

1 Turn off all components before making connections.

2 Twist and remove the insulation at the end of each speaker cord.

3 Turn the knob counterclockwise.

4 Insert the speaker cord.
   • For each speaker, connect the (+) and (–) terminals on the rear panel to the (+) and (–) terminals marked on the speakers.

4 Turn the knob clockwise.

Connecting the powered subwoofer

By connecting a subwoofer, you can enhance the bass or reproduce the original LFE signals recorded in digital software.

Connect the input jack of a powered subwoofer to the SUBWOOFER OUT jack on the rear panel, using a cord with RCA pin plugs (not supplied).
• Refer also to the manual supplied with your subwoofer.

After connecting all the speakers and/or a subwoofer, set the speaker setting information properly to obtain the best possible surround effect. For details, see pages 23, 24, 28, and 29.

NOTE
You can place a subwoofer wherever you like since bass sound is non-directional. Normally place it in front of you.

*When using a single speaker for the surround back speaker
You can enjoy the surround sound by one surround back speaker. When using one surround back speaker, – set “S BACK OUT” to “S BACK OUT: 1SPK” (see page 29) and – connect the surround back speaker to the left surround back speaker terminal. (No sound comes from the speaker if you connect it to the right surround back speaker terminal.)
Connecting audio and video components

Do not connect the AC power plug to the wall outlet until all connections are completed.

Video conversion function

This receiver can convert the video signals output from video components. The chart below shows which video signals can be converted into which signals by video conversion.

<table>
<thead>
<tr>
<th>Video Input</th>
<th>Converted Video Output</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI</td>
<td>HDMI</td>
</tr>
<tr>
<td>CMPNT (component)</td>
<td>CMPNT (component)</td>
</tr>
<tr>
<td>S (S-video)</td>
<td>S (S-video)</td>
</tr>
<tr>
<td>C (composite)</td>
<td>C (composite)</td>
</tr>
</tbody>
</table>

To use the video conversion function, you need to make the two settings below when you finish connecting your TV and video components.

**VIDEO OUTPUT:** Select the settings according to the connection method for your TV. See page 32 for details.

**VIDEO INPUT:** Select the settings according to the connection method for your video components. This setting is memorized for each source. See pages 11 to 15 and 20 for details.

Converted video signals available vary depending on each source component. See also pages 10 to 15 for details.

NOTES

- HDMI signals cannot be converted into other video signals.
- With input video signals converted into HDMI signals, the playback picture may be distorted when you change the playback mode (fast-forward, rewind, or pause, for example).

Before connecting video components

Before connecting video components, note the following below.

**IMPORTANT:**

The HDMI video signals from the HDMI terminal are transmitted only through the HDMI MONITOR OUT terminal. Therefore, if the TV is connected to the receiver through the VIDEO jack (MONITOR OUT), S-VIDEO jack (MONITOR OUT), or COMPONENT VIDEO jacks (MONITOR OUT) and a playing video component is connected to the receiver through the HDMI terminal (VCR (DBS) IN or DVR/DVD IN), you cannot view the playback picture on the TV.

**NOTES**

- When playing back audio and video with the HDMI connection, the HDMI lamp on the front panel lights up.
- Set the audio input setting to “HDMI” when you enjoy sound with the HDMI connection. See “Selecting the audio input setting” on page 20.
- When connecting a VCR or DBS to HDMI VCR (DBS) IN terminal, select “HDMI SELECT” (see page 32) correctly according to the component you connect. If you do not, you cannot view the playback picture on the TV.
- By using a HDMI-DVI conversion cable, you can connect the source components or the TV with DVI output. When connecting those components or TV, change the audio input setting to the setting other than “HDMI.” (See page 20.)
- This receiver is compatible with standard video formats. If non-standard video formats are coming in, the picture may not appear properly on TV.
- The picture on the TV may not be the same aspect ratio as the ratio set on the source components.
- When connecting a TV to this receiver with an HDMI cable, the sound coming into this receiver is not transmitted to the speakers of the TV. You can enjoy sound only from the speakers connected to this receiver.
- When connecting a TV to this receiver with an HDMI cable, turning a source component on or off, or changing the audio or video input setting of this receiver frequently may cause a noise or interrupt the sound and picture. In this case, turn the receiver off and turn it on again.
- When enjoying multi channel PCM sound with the audio input setting set to “HDMI” (see page 20), some functions are not available. See page 12 for details.
- When you enjoy HDCP contents, sound and picture may not be transmitted to the speakers and TV for a few seconds in the beginning for confirmation.

**CAUTION:**

If you connect a sound-enhancing device such as a graphic equalizer between the source components and this receiver, the sound output through this receiver may be distorted.
Connecting a TV:
Connect the TV to the appropriate MONITOR OUT jacks to view the playback picture from any other connected video components.

Select the appropriate VIDEO OUTPUT (see page 32) according to the terminal used for TV connection referring to the table below.

<table>
<thead>
<tr>
<th>Connection method</th>
<th>VIDEO OUTPUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI</td>
<td>HDMI</td>
</tr>
<tr>
<td>Component video</td>
<td>CMPNT</td>
</tr>
<tr>
<td>S-video</td>
<td>S</td>
</tr>
<tr>
<td>Composite video</td>
<td>C</td>
</tr>
</tbody>
</table>

NOTES:
- If connecting a TV only with the HDMI cable and setting the video input setting (see page 20) to "HDMI," the on-screen display does not appear on the TV screen. When using on-screen display, set the video input setting to the setting other than HDMI.
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). For details of digital audio connection, see page 16.
- When you enjoy contents protected by HDCP (High-Bandwidth Digital Content Protection, see page 1), connect a HDCP-compatible TV to this receiver, otherwise, the picture may not appear properly.

Do not connect the AC power plug to the wall outlet until all connections are completed.

Turn off all components before making connections.
- When you connect other components, refer also to their manuals.

Connecting a TV:
Connect the TV to the appropriate MONITOR OUT jacks to view the playback picture from any other connected video components.

- HDMI cable (not supplied)
- Component video cable (not supplied)
- S-video cable (not supplied)
- Composite video cable (not supplied)

To left/right audio channel output
To HDMI input
To component video input
To S-video input
To composite video input

DO NOT use a TV through a VCR or a TV with a built-in VCR; otherwise, the picture may be distorted.

NOTES:
- If connecting a TV only with the HDMI cable and setting the video input setting (see page 20) to "HDMI," the on-screen display does not appear on the TV screen. When using on-screen display, set the video input setting to the setting other than HDMI.
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). For details of digital audio connection, see page 16.
- When you enjoy contents protected by HDCP (High-Bandwidth Digital Content Protection, see page 1), connect a HDCP-compatible TV to this receiver, otherwise, the picture may not appear properly.

Connecting a TV:
Connect the TV to the appropriate MONITOR OUT jacks to view the playback picture from any other connected video components.

- HDMI cable (not supplied)
- Component video cable (not supplied)
- S-video cable (not supplied)
- Composite video cable (not supplied)

To left/right audio channel output
To HDMI input
To component video input
To S-video input
To composite video input

DO NOT use a TV through a VCR or a TV with a built-in VCR; otherwise, the picture may be distorted.

NOTES:
- If connecting a TV only with the HDMI cable and setting the video input setting (see page 20) to "HDMI," the on-screen display does not appear on the TV screen. When using on-screen display, set the video input setting to the setting other than HDMI.
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). For details of digital audio connection, see page 16.
- When you enjoy contents protected by HDCP (High-Bandwidth Digital Content Protection, see page 1), connect a HDCP-compatible TV to this receiver, otherwise, the picture may not appear properly.

Connecting a TV:
Connect the TV to the appropriate MONITOR OUT jacks to view the playback picture from any other connected video components.

- HDMI cable (not supplied)
- Component video cable (not supplied)
- S-video cable (not supplied)
- Composite video cable (not supplied)

To left/right audio channel output
To HDMI input
To component video input
To S-video input
To composite video input

DO NOT use a TV through a VCR or a TV with a built-in VCR; otherwise, the picture may be distorted.

NOTES:
- If connecting a TV only with the HDMI cable and setting the video input setting (see page 20) to "HDMI," the on-screen display does not appear on the TV screen. When using on-screen display, set the video input setting to the setting other than HDMI.
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). For details of digital audio connection, see page 16.
- When you enjoy contents protected by HDCP (High-Bandwidth Digital Content Protection, see page 1), connect a HDCP-compatible TV to this receiver, otherwise, the picture may not appear properly.
Do not connect the AC power plug to the wall outlet until all connections are completed.

- Connecting a DVD recorder or DVD player

Turn off all components before making connections.
- When you connect other components, refer also to their manuals.

Select the appropriate VIDEO INPUT (see page 20) according to the connection you have made. If you do not, you cannot view the playback picture on the TV.

Available video input setting for each video output setting:
- Available: – Not available

</tr>
</tbody>
</table>

Notes:
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). When shipped from the factory, the digital coaxial terminal (DIGITAL IN 1 (DVR/DVD)) on the rear of the receiver is set for a DVD recorder and DVD player. For details of digital audio connection, see page 16.
- If your DVD recorder or DVD player is equipped with the analog multi-channel output terminals, you can enjoy the sound recorded in DVD-Audio by connecting your DVD recorder or DVD player to DVD MULTI IN jacks. See page 12 for details.
- When you enjoy the sound recorded in DVD-Audio with HDMI connection, see "When you enjoy sound recorded in DVD-Audio..." on page 12.
When you connect a DVD recorder or DVD player with its analog discrete output jacks (DVD MULTI IN):

If your DVD recorder or DVD player has analog 5.1 channel output jacks, use the connection below. When a DVD Audio disc is played back, the original high-quality sounds can be reproduced by using this connection.

Turn off all components before making connections.
- When you connect other components, refer also to their manuals.

When you enjoy sound recorded in DVD-Audio...

You can enjoy sound recorded in DVD-Audio both with analog or digital methods.

- With analog method:
  - connect your DVD recorder or DVD player to this receiver according to the diagram above.
  - select “A MULTI” in the audio input setting. (See page 20.)

- With digital method:
  - connect your DVD recorder or DVD player and TV to this receiver with the HDMI cables. (See page 11.)
  - select “HDMI” in the audio input setting. (See page 20.)

**NOTES**
- When selecting “A MULTI” in the audio input setting or when multi channel PCM signals (see page 42) are coming in with selecting “HDMI” in the audio input setting, the following items are not available:
  - DECODE MODE (see page 21)
  - CC Converter (see page 22)
  - EX/ES/PLix (see page 30)
  - SUBWFR OUT (see page 30)
  - CROSSOVER (see page 31)
  - LFE ATT (see page 31)
  - MIDNIGHT (see page 31)
  - AUDIO DELAY (see page 31)
  - DIGITAL EQ 63Hz/250Hz/1kHz/4kHz/16kHz (see page 37)
  - BASS BOOST (see page 37)
  - INPUT ATT (see page 37)
  - Sound parameters for Surround/DSP modes (see pages 37 and 38)
  - Surround/DSP modes (see pages 41 to 45)
- When you enjoy sound recorded in DVD-Audio through the HDMI connection, use a DVD recorder or DVD player compatible with HDMI version 1.1.

---

**Diagram Notes**
- A: To left/right surround channel audio output

</tbody>
</table>

NOTES:
- Select the audio and video input setting according to the connection method. See page 20 for details.
- In addition to using the HDMI cable, you can enjoy digital sound as well using a digital audio cable (coaxial or optical). When shipped from the factory, the digital optical terminal (DIGITAL IN 2 (DBS)) on the rear of the receiver is set for a DBS tuner. For details of digital audio connection, see page 16.
- When connecting a DBS tuner with a HDMI cable or component video cable, set “HDMI SELECT” or “CMPNT SELECT” to “DBS.” (see page 32)
Do not connect the AC power plug to the wall outlet until all connections are completed.

Connecting a video component to the AUX input jacks
The AUX input jacks on the front panel (inside the front door) are convenient when connecting and disconnecting the component frequently.
Before making connections, press PUSH-OPEN to show the jacks.
To enjoy the playback from the component connected to these jacks, select “AUX” as the source (see page 19).

To left/right audio channel output
To composite video output
To S-video output
To digital optical output

NOTE
Select the audio and video input setting according to the connection method. See page 20 for details.

Select the appropriate VIDEO INPUT (see page 20) according to the connection you have made. If you do not, you cannot view the playback picture on the TV.

</table>

NOTE
Select the audio and video input setting according to the connection method. See page 20 for details.

Connecting a SIRIUS radio

To connect KT-SR2000 (JVC SIRIUS radio) to this receiver, it is required to separately purchase KS-K6013 Home Docking Kit.
You cannot use a digital audio cable (coaxial or optical) to connect a SIRIUS radio to this receiver.
After connecting a SIRIUS radio to the TV IN jacks, change the source name to “SIRIUS.” See page 19 for details.
Digital audio connection
This receiver is equipped with three DIGITAL IN terminals—one digital coaxial terminal and two digital optical terminals—and one DIGITAL OUT terminal on the rear of the receiver. To reproduce the digital sound, use the digital audio connection in addition to the analog audio connection methods described on pages 10 to 15.

Digital output terminal
You can connect any digital components which have an optical digital input terminal.

Digital input terminals

- When shipped from the factory, the DIGITAL IN terminals on the rear of the receiver have been set for use with the following components:
  - 1(DVR/DVD): For DVD recorder or DVD player
  - 2(DBS): For DBS tuner
  - 3(VCR): For VCR
- If you connect other components, change the digital input (DIGITAL IN) terminal setting correctly. See “Setting the digital input (DIGITAL IN) terminals—DIGITAL IN 1/2/3” on page 31.
- Select the correct digital input mode. See “Selecting the audio input setting” on page 20.

Digital coaxial cable (not supplied)
Digital optical cable (not supplied)

Turn off all components before making connections.
- When you connect other components, refer also to their manuals.

Connecting digital recording equipment to the DIGITAL OUT terminal enables you to perform digital-to-digital recording.

Connecting the power cord
When all the audio/video connections have been made, connect the AC power plug to the wall outlet. Make sure that the plugs are inserted firmly. The standby lamp lights in red.

CAUTIONS:
- Do not touch the power cord with wet hands.
- Do not alter, twist or pull the power cord, or put anything heavy on it, which may cause fire, electric shock, or other accidents.
- If the cord is damaged, consult a dealer and have the power cord replaced with a new one.

NOTES
- When shipped from the factory, the DIGITAL IN terminals on the rear of the receiver have been set for use with the following components:
  - 1(DVR/DVD): For DVD recorder or DVD player
  - 2(DBS): For DBS tuner
  - 3(VCR): For VCR
- If you connect other components, change the digital input (DIGITAL IN) terminal setting correctly. See “Setting the digital input (DIGITAL IN) terminals—DIGITAL IN 1/2/3” on page 31.
- Select the correct digital input mode. See “Selecting the audio input setting” on page 20.

Digital coaxial cable (not supplied)
Digital optical cable (not supplied)

Before connecting a digital optical cable, unplug the protective plug.

NOTES
- The digital signal format transmitted through the DIGITAL OUT terminal is the same as that of the input signal. For example, when the DTS signals are coming, the DTS signals are transmitted.
- The digital audio signals coming through the following terminals cannot be transmitted through the DIGITAL OUT terminal:
  - USB WIRELESS ANTENNA terminal
  - USB terminal
  - HDMI VCR(DBS) IN terminal and HDMI DVR/DVD IN terminal

Connecting the power cord
When all the audio/video connections have been made, connect the AC power plug to the wall outlet. Make sure that the plugs are inserted firmly. The standby lamp lights in red.

CAUTIONS:
- Do not touch the power cord with wet hands.
- Do not alter, twist or pull the power cord, or put anything heavy on it, which may cause fire, electric shock, or other accidents.
- If the cord is damaged, consult a dealer and have the power cord replaced with a new one.

NOTES
- Keep the power cord away from the connecting cables and the antenna. The power cord may cause noise or screen interference.
- The preset settings such as preset channels and sound adjustment may be erased in a few days in the following cases:
  - When you unplug the power cord.
  - When a power failure occurs.
- If you unplug the power cord with the receiver on and connect the power cord again, the receiver enters standby mode.

Connecting digital recording equipment to the DIGITAL OUT terminal enables you to perform digital-to-digital recording.

Connecting the power cord
When all the audio/video connections have been made, connect the AC power plug to the wall outlet. Make sure that the plugs are inserted firmly. The standby lamp lights in red.

CAUTIONS:
- Do not touch the power cord with wet hands.
- Do not alter, twist or pull the power cord, or put anything heavy on it, which may cause fire, electric shock, or other accidents.
- If the cord is damaged, consult a dealer and have the power cord replaced with a new one.

NOTES
- Keep the power cord away from the connecting cables and the antenna. The power cord may cause noise or screen interference.
- The preset settings such as preset channels and sound adjustment may be erased in a few days in the following cases:
  - When you unplug the power cord.
  - When a power failure occurs.
- If you unplug the power cord with the receiver on and connect the power cord again, the receiver enters standby mode.
USB connection

This receiver is equipped with a USB terminal on the front panel and a USB WIRELESS ANTENNA terminal on the rear. You can enjoy the sound reproduced through your PC with either of the following methods:
1. connecting a USB wireless antenna (supplied) to the USB WIRELESS ANTENNA terminal and a USB wireless transmitter (supplied) to your PC. (USB WIRELESS)
2. connecting your PC to the USB terminal with a USB cable (not supplied). (USB TERMINAL)
When you connect your PC for the first time, follow the procedure below.
• Remember you cannot send any signal or data to your PC from this receiver.
• Use USB extension cable (supplied) if it is difficult to connect the transmitter directly to the USB connector or the transmitter becomes obstacle to other USB connectors.

IMPORTANT:
Check if your PC equipped with the CD-ROM drive is running on Windows® 98 SE*, Windows® Me*, Windows® 2000* or Windows® XP* and prepare its CD-ROM.

Preparation

1. For USB WIRELESS
   Be sure to make USB WIRELESS communication before connection and installation of the receiver. During the procedure, you need to check the status of the lamp on the rear of the receiver (turning on or flashing).
   1. Connect the antenna to the USB WIRELESS ANTENNA terminal on the rear panel.
      • Tighten the screw with the antenna upright.
   2. Turn on your PC.
      • If the PC has been turned on, quit all the applications now running.
   3. Connect the USB wireless transmitter to the USB connector of the PC.
      Before connecting the transmitter to the PC, remove the cover of the transmitter.
      When you connect the transmitter, the USB drivers are installed. The POWER and PLAYER lamp on the transmitter light up.

4. Turn on the receiver, then slide the USB WIRELESS switch on the rear to “ID LEARNING,” and select the source as “USB WIRELESS.”
When you slide the switch, the lamp in the switch starts flashing.

5. Set the volume to minimum.

   IMPORTANT:
   Always set volume to “0” when connecting or disconnecting the other equipment.

6. Press and hold ID on the transmitter to make a wireless communication with the receiver.
When you press and hold the button, the ID lamp on the transmitter flashes.

When the receiver recognizes the transmitter, the lamp on the rear of the receiver stops flashing and lights up.

7. Slide the switch on the receiver to “ON.”
   • If you do not, no sound signal is transmitted to the receiver.

NOTES
• The signal-reachable distance is about 30 m (100 ft.), but it may differ depending on the operating conditions and circumstances.
• The PLAYER lamp on the transmitter keeps flashing when starting the playback software in your PC.
• If no signals are transmitted from the transmitter for about 30 minutes, the transmitter enters “sleep” mode. The “L” and “R” indicators go off from the display.
• Though the transmitter may become hot, it is not a malfunction.

2. For USB TERMINAL
   1. Turn on your PC.
      • If the PC has been turned on, quit all the applications now running.
   2. Turn on the receiver, and select the source as “USB TERMINAL.”
   3. Set the volume to minimum.

   IMPORTANT:
   Always set volume to “0” when connecting or disconnecting the other equipment.

4. Connect the receiver to the PC using a USB cable (not supplied).
   • Use “USB series A plug to B plug” cable when connecting.

CONTINUED ON THE NEXT PAGE
How to install the USB drivers

The following procedure is described using the English version of Windows® XP. If your PC is running on a different version of operation system in a different language, the screens shown on your PC’s monitor will differ from the ones used in the following procedure.

The following procedure is applied both to USB WIRELESS and USB TERMINAL.

1. The USB drivers are installed automatically.
   • If the USB drivers are not installed automatically, install the USB drivers by following the instructions on the PC’s monitor.

2. Check if the drivers are correctly installed.
   1. Open the Control Panel on your PC:
      Select [Start] — [Control Panel].
      • The following window appears, and you can check whether the drivers are installed.

Now PC is ready for playback through the USB connection.

After installation is completed, you can use your PC as the playback source. The PC automatically recognizes the receiver whenever the transmitter is connected to the PC or the USB cable is connected between the PC and the receiver while the receiver is turned on.

• When not using the PC as the playback source, disconnect the transmitter or the USB cable.

To play back sounds on the PC, refer to the manuals supplied with the sound reproduction application installed in the PC. Start the application after the USB device is recognized.

When playing back with USB WIRELESS, connect the transmitter and aim the transmitter at the antenna. If any obstacles are in between, playback will be interrupted or the wireless communication will be canceled.

If noise comes during playback or playback is interrupted with USB WIRELESS, try measures below:

• press CHANNEL on the transmitter to search for another frequency. Each time you press CHANNEL, the frequency advances one channel up from CH 1 up to CH 13.
• press and hold CHANNEL for more than three seconds to make sure the transmitter detects the best frequency automatically.

If no sound comes from the speakers, check the following items:

For both USB WIRELESS and USB TERMINAL
– check the USB device is recognized properly.
– check the playback software in your PC is compatible with the USB device.
– open the Control Panel on your PC, select [Sounds and Audio Devices] — [Audio] tab — [Sound playback] — [Default device], and check [Default device] is set to [USB Audio device].

For USB WIRELESS
– select “USB WIRELESS” as the source.
– connect the USB wireless transmitter correctly with the USB WIRELESS switch on the receiver “ON.”
– keep proper distance between the receiver and your PC.
– check the ID lamp on the transmitter and the signal indicators “L” and “R” on the display light up.

For USB TERMINAL
– select “USB TERMINAL” as the source.
– connect the USB cable correctly.

NOTES

• DO NOT turn off the receiver or disconnect the transmitter or the USB cable while installing the drivers and for several seconds while your PC is recognizing the receiver.
• If your PC does not recognize the receiver, disconnect the transmitter or the USB cable and connect it again. If it does not work yet, restart Windows.
• The installed drivers can be recognized only when the transmitter is connected to your PC or the USB cable is connected between the receiver and your PC.
• The sound may not be played back correctly—interrupted or degraded—due to your PC settings and PC specifications.
• In case that the transmitter has an influence on the wireless systems (based on IEEE 802.11b/11g, the cordless telephone, and the microwave oven), try measures below:
   – press CHANNEL on the transmitter to search for another frequency. Each time you press CHANNEL, the frequency advances one channel up from CH 1 up to CH 13.
   – press and hold CHANNEL for more than three seconds to make sure the transmitter detects the best frequency automatically.
   – to keep the distance between the transmitter and the LAN antenna utilize the supplied extension cord.
• Use a USB cable (version 1.1 or later). Recommended cord length is 1.5 m.

Basic operations

1 Turn on the power
Press \( \text{STANDBY/ON} \) (or \( \text{AUDIOn} \) on the remote control).
The standby lamp goes off and the source lamp of the current source lights in red.

Current source name appears.

To turn off the power (into standby)
Press \( \text{STANDBY/ON} \) (or \( \text{AUDIOn} \) on the remote control) again.
The standby lamp lights in red.

NOTES:
• A small amount of power is consumed in standby mode. To turn the power off completely, unplug the AC power cord.
• Turning a source component on before turning the receiver on may cause a noise or interrupt the sound and picture. In this case, turn both the source component and the receiver off, then turn the receiver on before turning the source component on.

2 Select the source to play
On the front panel:
Turn SOURCE SELECTOR until the source name you want appears on the display.
The source lamp corresponding to the selected source lights in red.
• As you turn SOURCE SELECTOR, the source changes as follows:

<table>
<thead>
<tr>
<th>Source</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DVR/DVD</td>
<td>Select this for the DVD recorder or DVD player.</td>
</tr>
<tr>
<td>VCR</td>
<td>Select this for the VCR.</td>

</tr>
</tbody>
</table>

From the remote control:
Press one of the source selecting buttons.
• For "USB WIRELESS" and "USB TERMINAL," press USB. Each time you press USB, the mode alternates between "USB WIRELESS" and "USB TERMINAL."
• For "FM" and "AM," press FM/AM. Each time you press FM/AM, the mode alternates between "FM" and "AM."

• Changing the source name
On the front panel ONLY:
Press SET when "TV" is selected as the source.
• "ASSIGN SIRIUS" appears on the display for a while.

NOTE
When you change the source name to "TV," press SET when "SIRIUS" is selected as the source. "ASSIGN TV" appears on the display for a while.
Selecting the video input setting
Select the proper video input setting according to the connection method on pages 11 to 15.

**From the remote control ONLY:**
Press VIDEO INPUT to select the video input setting.
- Each time you press the button, the input setting changes as follows. This setting is memorized for each source.

<table>

**Initial setting of VIDEO INPUT and AUDIO INPUT for each source**

Selecting the audio input setting
Select the proper audio input setting according to the connection method (analog or digital) on pages 10 to 16.
- In case of digital connection using the terminals on the rear of the receiver, you also need to select the correct digital input terminal. (See “Setting the digital input (DIGITAL IN) terminals—DIGITAL IN 1/2/3” on page 31.)

**From the remote control ONLY:**
Press AUDIO INPUT to select the audio input setting.
- Each time you press the button, the audio input setting changes as follows. This setting is memorized for each source.

<table>
<thead>
<tr>
<th>Setting</th>
<th>VIDEO INPUT</th>
<th>AUDIO INPUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI (for &quot;DVR/DVD,&quot; &quot;VCR&quot; and &quot;DBS&quot;):</td>
<td>Select for the source with HDMI connection. The receiver automatically detects the incoming signal format, then the digital signal format indicator (LINEAR PCM, I2/24BIT, or I2/24) for the detected signal lights up, and the HDMI lamp on the front panel lights up.</td>
<td></td>
</tr>
<tr>
<td>DIGITAL*:</td>
<td>Select for the digital input setting. The receiver automatically detects the incoming signal format, then the digital signal format indicator (LINEAR PCM, I2/24BIT, or I2/24) for the detected signal lights up.</td>
<td></td>
</tr>
<tr>
<td>ANALOG*:</td>
<td>Select for the analog input setting. The ANALOG indicator lights up on the display.</td>
<td></td>
</tr>
<tr>
<td>A MULTI (Only for &quot;DVR/DVD&quot;):</td>
<td>Select when connecting a DVD recorder or DVD player to DVD MULTI IN jacks (see page 12). The ANALOG indicator lights up on the display.</td>
<td></td>
</tr>
</tbody>
</table>

**CAUTION:**
Always set the volume to the minimum before starting any sources. If the volume is set at its high level, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

**NOTE:**
The volume level can be adjusted within the range of “0” (minimum) to “50” (maximum).

Adjust the volume
To increase the volume, turn MASTER VOLUME control clockwise (or press VOLUME + on the remote control).
To decrease the volume, turn MASTER VOLUME control counterclockwise (or press VOLUME – on the remote control).
- When you adjust the volume, the volume level indication appears on the display for a while.

**CAUTION:**
When “TV” is selected as the source, only “DIGITAL” or “ANALOG” appears on the display as the audio input setting.

Listening with headphones
You can enjoy not only stereo software but also multi-channel software through the headphones. (Sounds are down-mixed to the front channels while playing multi-channel software.)

Connect a pair of headphones to the PHONES jack on the front panel to activate the HEADPHONE mode.
- The HEADPHONE indicator lights up on the display.
- The Surround/Auto mode is also engaged, but the 3D surround effect is not active.

**CAUTION:**
Disconnecting a pair of headphones from the PHONES jack cancels the HEADPHONE mode and returns the sound to the speakers.

When using headphones:
Before connecting or putting on headphones, as high volume may damage both the headphones and your hearing.
Before removing headphones, as high volume may damage your hearing.
Selecting the digital decode mode

This receiver automatically detects the incoming digital signal format when “HDMI” or “DIGITAL” is selected in the audio input setting (see page 20). When “HDMI” or “DIGITAL” is selected, the digital decode mode is set to “DGTL (Digital) AUTO,” and the DIGITAL AUTO indicator lights up on the display.

If the following symptoms occur while playing Dolby Digital or DTS software with “DGTL AUTO” selected, follow the procedure below:

• Sound does not come out at the beginning of playback.
• Noise comes out while searching for or skipping chapters or tracks.

From the remote control ONLY:
Press DECODE MODE to select “DOLBY DIGITAL” or “DTS.”

• Each time you press DECODE MODE, the digital decode mode changes as follows:
  
  ![Digital Decode Mode Options]

• To play back software encoded with Dolby Digital, select “DOLBY DIGITAL.”
• To play back software encoded with DTS, select “DTS.”

NOTE
“DOLBY DIGITAL” or “DTS” is automatically reset to “DGTL AUTO” in the following cases:
— When you turn off the receiver.
— When you select another source.

Turning off the sounds temporarily

From the remote control ONLY:
Press MUTING to turn off the sound through all connected speakers and headphones.

“MUTING” appears on the display and the volume turns off.

To restore the sound, press MUTING again.
• Pressing VOLUME +/- (or turning MASTER VOLUME control on the front panel) also restores the sound.

Changing the display brightness

You can dim the display—Dimmer.

From the remote control ONLY:
Press DIMMER repeatedly.

• Each time you press the button, the display brightness changes as follows:
  
  ![Dimmer Options]

The following digital signal format indicators on the display indicate what type of signal comes into the receiver.

LINEAR PCM:
Lights up when Linear PCM signal comes in.
• When the multi-channel PCM signal comes in, “MULTI CH PCM” appears on the display for a while.

DIGITAL:
Lights up when Dolby Digital signal comes in.
• Flashes when “DOLBY DIGITAL” is selected for any software other than Dolby Digital.

DTS:
Lights up when conventional DTS signal comes in.
• Flashes when “DTS” is selected for any software other than DTS.

DTS 96/24:
Lights up when DTS 96/24 signal comes in.

NOTE
When “DGTL AUTO” cannot recognize the incoming signal, no digital signal format indicator lights up on the display.
Turning off the power with the Sleep Timer

You can fall asleep while listening to music—Sleep Timer.

From the remote control ONLY:

Press SLEEP repeatedly.

- Each time you press the button, the shut-off time changes in 10 minute intervals. The SLEEP indicator lights up on the display.

When the shut-off time comes:
The receiver turns off automatically.

To check or change the remaining time until the shut-off time:
Press SLEEP once.
The remaining time (in minutes) until the shut-off time appears.

To cancel the Sleep Timer:
Press SLEEP repeatedly so that “SLEEP OFF” appears on the display. (The SLEEP indicator goes off.)
- The Sleep Timer is also canceled when you turn off the receiver.

Making sounds natural

JVC’s CC (Compression Compensative) Converter eliminates jitter and ripples, achieving a drastic reduction in digital distortion by processing the digital music data in 24 bit-quantization and by expanding the sampling frequency to 176.4 kHz (for fs 44.1 kHz signals)/192 kHz (for fs 48 kHz signals) on the front speakers. By using the CC Converter, you can obtain a natural sound field from both digital and analog sources.

Press CC CONVERTER repeatedly.
- Each time you press the button, the mode changes as follows:
  CC CNVRTR 1: Select when playing back an analog source or a digital source with non compressed digital sound signal (Linear PCM).
  The CC CONVERTER 1 indicator lights up on the display.
  CC CNVRTR 2: Select when playing back a source with compressed digital sound signal (Dolby Digital or DTS).
  The CC CONVERTER 2 indicator lights up on the display.
  CC CNVRTR OFF: Select when not using the CC Converter.

Basic adjustment of auto memory

This receiver memorizes sound settings for each source:
- when you turn off the power, and
- when you change the source.

When you change the source, the memorized settings for the newly selected source are automatically recalled.

The following can be stored for each source:
- Audio input setting (see page 20)
- Midnight mode (see page 31)
- Volume level for each source when One Touch Operation is set to “ONE TOUCH OP: ON” (see page 32)
- Digital equalization pattern (see page 37)
- Bass boost (see page 37)
- Input attenuator mode (see page 37)
- Surround/DSP mode selection (see page 45)

NOTE

If the source is “FM” or “AM,” you can assign a different setting for each band.

Signal and speaker indicators on the display

The signal indicators light up as follows:

- When digital input is selected: Lights up when the left channel signal comes in.
- When analog input is selected: Always lights up.
- When digital input is selected: Lights up when the right channel signal comes in.
- When analog input is selected: Always lights up.
- Lights up when the center channel signal comes in.
- Lights up when the left surround channel signal comes in.
- Lights up when the right surround channel signal comes in.
- Lights up when monaural surround signal comes in.
- Lights up when the surround back channel signal comes in.
- Lights up when the LFE channel signal comes in.

NOTES

- When "A MULTI" is selected in the audio input setting (see page 20), all the signal indicators except “SB,” “S,” and “LFE” light up.
- When playing back multi-channel digital sound recorded in DVD-Audio with HDMI connection (see pages 11 and 20), the signal indicators may not light up correctly.

The speaker indicators light up as follows:

- The subwoofer indicator (SWFR) lights up when “SUBWOOFER” is set to “SUBWOOFER: YES.” For details, see page 28.
- The other speaker indicators light up only when the corresponding speaker is set to “SMALL” or “LARGE,” and also when required for the current playback.
To obtain the best possible sound effect from Surround/DSP modes (see pages 41 to 45), you need to set up the speaker and subwoofer information after all the connections are completed. From pages 23 to 32, how to set speakers and other basic items of the receiver are explained.

Setting the speaker information automatically—Smart Surround Setup

The distance from your listening point to the speakers is one of the important elements to obtain the best possible sound effect from the Surround/DSP modes. By using Smart Surround Setup, the following are automatically calculated by one simple action—clapping hands.

• Speaker distance (compared to that of the closest speaker)
• Speaker output level (except the subwoofer)

NOTES
• Before starting Smart Surround Setup, set the speaker information correctly (SMALL, LARGE, or NO) according to your speakers except the subwoofer (see page 28).
• When the setting is made by Smart Surround Setup, the speaker distance and output level you have set before will be inactive.
• You can see the setting process on the TV screen and the display during Smart Surround Setup. If you have turned off the display, cancel the Dimmer (see page 21); otherwise, you cannot see the information on the display.
• Smart Surround Setup will not be done correctly if you or other object blocks the sound.
• When you change your speakers, do the following procedure again.

In this section, the on-screen display on the TV screen is used for explaining.
• The on-screen display does not appear on the TV screen when the video input setting (see page 20) is set to “HDMI.”

From the remote control ONLY:

1. Take your position where you listen to the sound.
   • Make sure speaker cables are connected firmly.

2. Press and hold SMART S. SETUP until “SETTING UP” flashes.

3. When “CLAP YOUR HANDS.” appears, clap your hands over your head once while the indications still remain.
   • On the display, “SETTING UP” stops flashing.
   The receiver starts detecting the level of the sound coming through each speaker (except the subwoofer).
When your clapping sound is detected successfully

- On the TV screen, “SUCCESSFUL,” “RESULT,” and the setting values appear. The setting values are shown for about 10 seconds.

Ex.: On the display, “SUCCESSFUL” appears, then the setting values are shown as follows for about 10 seconds:

<table>
<thead>
<tr>
<th>Speaker</th>
<th>Distance</th>
<th>Output Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>FL</td>
<td>+0.3m</td>
<td>+6</td>
</tr>
<tr>
<td>C</td>
<td></td>
<td></td>
</tr>
<tr>
<td>FR</td>
<td>+0.3m</td>
<td>+2</td>
</tr>
<tr>
<td>SL</td>
<td>SUCCESSFUL</td>
<td>RESULT</td>
</tr>
<tr>
<td>SR</td>
<td>+0.6m</td>
<td>+2</td>
</tr>
<tr>
<td>SBL</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SBR</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- *8 Standard channel (the closest speaker). This speaker position now works as the reference position (“0m/ft”) and other speakers’ distance is shown by the difference with this reference speaker position.

- *9 Difference of each speaker position in distance (in meters or feet).

- *10 Each speaker’s output level (–6 to +6).

When finishing displaying the setting values

On the TV screen, “COMPLETED” appears, then “TEST TONE” and “END” appear. On the display, “TEST?” and “END?” appears.

- To adjust the speakers’ output levels manually, press TEST (see page 36).

- To erase the on-screen display, press SET or any button except TEST.

- The receiver returns to normal operation mode automatically if no operations are done for about 10 seconds.

Ex.: SMART SURROUND SETUP

<table>
<thead>
<tr>
<th>Speaker</th>
<th>Distance</th>
<th>Output Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>FL</td>
<td>+0.3m</td>
<td>+6</td>
</tr>

<td>+0.6m</td>
<td>+2</td>
</tr>
<tr>
<td>SBL</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SBR</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

When your clapping sound is not detected correctly

“SETTING UP” appears again after one of the following messages. In this case, repeat step 3.

**SILENT:**
- The receiver detects sound from only the left and right front speakers.
- The receiver detects no sound from the front speakers and detects sound from at least one of the other speakers.

**SILENT-ALL:** The receiver cannot detect any sound from any speaker for about 10 seconds.

**AGAIN:**
- The receiver cannot detect sound from the left or right front speaker.
- The receiver fails to calculate the speakers’ output level and difference of each speaker’s position in distance.

In the following cases, set the speakers manually.

- **When “SILENT” appears twice in succession**
  The setting is partially made. (The distance of the speakers from which sound has not been detected is set to “+9.0m (+30ft).”)
  The receiver exits from Smart Surround Setup.

- **When “MANUAL” appears**
  The receiver fails to detect the sound three times. The receiver exits from Smart Surround Setup.

To cancel Smart Surround Setup, press EXIT while “SETTING UP” flashes.

- No other operations can be accepted after “SETTING UP” stops flashing. Complete the Smart Surround Setup.

To check the current setting made by Smart Surround Setup, press SMART S. SETUP while the receiver is in normal operation mode.

The setting values appear. On the display, the setting values are shown one after another.

- The current setting is not indicated but “MANUAL” appears if you change the following settings after using Smart Surround Setup:
  - If you change speaker distance manually.
  - If you change one of the speaker sizes either from “NO” to “SMALL” or “LARGE,” or from “SMALL” or “LARGE” to “NO.”

To check the current setting, see each setting item of the speaker distance (see page 29) and the speaker output level (see page 36).

- If you have not used Smart Surround Setup, “NO S.S.S.” appears.

**NOTES**

- When Smart Surround Setup does not work properly, try measures below:
  - Set the volume to “0.”
  - Turn off the components (TV, DVD player, DVD recorder, or subwoofer, for example) near this receiver or the speakers.

- The speaker distance and output level manually set will be applied instead of those set by using Smart Surround Setup in the following cases:
  - When you change one of the speaker distances (see page 29).
  - When you change one of the speaker sizes either from “NO” to “SMALL” or “LARGE,” or from “SMALL” or “LARGE” to “NO” (see page 28).

- When you want to adjust the speaker distance and output level manually, see pages 29 and 36.

- When the headphone is in use, the receiver returns to normal operation mode without showing “TEST TONE.”

- The speakers which are set to “NO” in the speaker setting (see page 28) are not indicated clearly on the TV screen.

- Do not clap your hands so hard that it may hurt your hands.
Basic setting items
You can adjust the following items. See pages in parentheses for details.
• You cannot select the items which is not available with the current setting. For example, when “S BACK SPK” is set to “S BACK SPK: NO,” you cannot select the following items:
S BACK OUT, SB SPK DIST., SBL SPK DIST., SBR SPK DIST.
• The name of the item shown below is the on-screen display indication and the name in parentheses is the display indication.

<table>

</tbody>
</table>

Items To do

- CMPNT SELECT Select the source for COMPONENT VCR (CMPNT SELECT) (DBS) in jacks. (32)
- VIDEO OUTPUT Select the output video signal according to the connection method for a TV. (32)
- SUPERIMPOSE Select to superimpose the menus on the TV screen. (32)

* If you have used Smart Surround Setup on pages 23 and 24, these settings are not required.

NOTE
Some items are not available when multi channel PCM (see page 42) signals recorded in DVD-Audio are coming. See page 12 for details.

Operation through on-screen display menus
You can make adjustments to the basic settings easily by using the on-screen display menus.

Menu operation buttons
On the front panel:

<table>
<thead>
<tr>
<th>Button / JOG</th>
<th>To do</th>
</tr>
</thead>
<tbody>
<tr>
<td>SETTING button</td>
<td>show setting item previously selected.</td>
</tr>
<tr>
<td>SET button</td>
<td>move to the selected menu or return to the previous SETTING MENU.</td>
</tr>
</tbody>
</table>
| MULTI JOG    | • select a menu or an item.  
|              | • change a setting.                        |

From the remote control:

<table>
<thead>
<tr>
<th>Button</th>
<th>To do</th>
</tr>
</thead>
<tbody>
<tr>
<td>SETTING button</td>
<td>show setting item previously selected.</td>
</tr>
</tbody>
</table>
| ▲ / ▼ buttons | select a menu or an item.  
| SET button | move to the selected menu or return to the previous SETTING MENU. |
| EXIT button | exit from the SETTING MENU. |
| ▲ / ▼ buttons | change a setting.                        |
Setup menu configuration

- Items on the menus shown below are all set to the initial values when shipped from the factory.
- Some of the menus or some items on the menu cannot be shown or cannot be adjusted depending on the current settings and the connections. (For details, see the respective explanations in this section.)

**SETTING MENU (1)**
- **SUBWOOFER**: NO
- **FRONT SPK**: LARGE
- **CENTER SPK**: SMALL
- **SURROUND SPK**: SMALL
- **SURROUND BACK SPK**: SMALL
- **SURROUND BACK OUT**: 2SPK

**SETTING MENU (2)**
- **DISTANCE UNIT**: meter
- **FL SPK DIST**: 3.0m
- **FR SPK DIST**: 3.0m
- **SL SPK DIST**: 3.0m
- **SR SPK DIST**: 3.0m
- **SBL SPK DIST**: 3.0m
- **SBR SPK DIST**: 3.0m

**SETTING MENU (3)**
- **EX/ES/PLX**: AUTO
- **DUAL MONO**: MAIN
- **SUBWFR OUT**: LFE
- **CROSSOVER**: 100Hz
- **LFE ATT**: 0dB
- **MIDNIGHT**: OFF

**SETTING MENU (4)**
- **DIGITAL IN 1**: DVR/DVD
- **DIGITAL IN 2**: DBS
- **DIGITAL IN 3**: VCR
- **AUDIO DELAY**: OFF
- **ONE TOUCH OP**: OFF

**SETTING MENU (5)**
- **HDMI SELECT**: VCR
- **COMPONENT SELECT**: VCR
- **VIDEO OUTPUT**: HDMI
- **SUPERIMPOSE**: ON

See page 28

See page 29

See page 30

See page 31
Menu operating procedure

When operating, the on-screen display appears on the TV screen regardless of the SUPERIMPOSE setting (see page 32).

Before you start, remember...

There is a time limit in doing the following steps. If the setting is canceled before you finish, start from step 1 again.

In this section, the operation of the remote control is used for explaining.

Ex.: When setting DIGITAL IN 1 terminal.

<table>
<thead>
<tr>
<th>Operations</th>
<th>On the TV screen</th>
<th>On the display</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 To start the setting, press SETTING.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The setting item previously selected can be shown on the TV screen by pressing SETTING on the front panel when the receiver is in normal operation mode.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2 To select the desired submenu, press ▲ or ▼ repeatedly.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>There are five screens from &quot;SETTING MENU (1)&quot; to &quot;SETTING MENU (5).&quot; To change the screen, simply pressing ▲ or ▼ repeatedly. You can go to the next/previous screen.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• On the front panel, turn MULTI JOG.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

CONTINUED ON THE NEXT PAGE
3 Press SET.

4 To select the appropriate setting, press ← or → repeatedly, then press SET.

5 Repeat steps 2 to 4 to set other items if necessary.

NOTE

To exit from menu operations, press EXIT on the remote control. On the front panel, press SETTING.

Setting the items

When performing the basic settings viewing the indications on the display, the indications are slightly different from what is shown on the on-screen display. This is because of the limited number of characters shown on the display.

Ex.: • “SUBWOOFER: YES” is shown as “SUBWFR <YES>” on the display.
   • “CROSSOVER: 100Hz” is shown as “CROSS <100Hz>” on the display.

Setting the speakers

To obtain the best possible surround effect from the Surround and DSP modes, register the setting about the speaker after all connections are completed.

Setting subwoofer information—SUBWOOFER

Select whether you have connected a subwoofer or not.

SUBWOOFER: YES  Select when you have connected a subwoofer. The subwoofer indicator (SWFR) lights up on the display. You can adjust the subwoofer output level (see page 36).

SUBWOOFER: NO  Select when you have disconnected a subwoofer. Selecting this changes the front speaker size to “LARGE” (see the right column).

Initial setting: SUBWOOFER: NO

Setting the speaker size—FRONT SPK (front speakers), CENTER SPK (center speaker), SURR SPK (surround speakers), S BACK SPK (surround back speakers)

Register the sizes of all the connected speakers.

<table>
<thead>
<tr>
<th>Size</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LARGE</td>
<td>Select when the cone speaker size is larger than 12 cm (4 3/4 inches).</td>
</tr>
<tr>
<td>SMALL</td>
<td>Select when the cone speaker size is smaller than 12 cm (4 3/4 inches).</td>
</tr>
<tr>
<td>NO</td>
<td>Select when you have disconnected a speaker. (Not selectable for the front speakers.)</td>
</tr>
</tbody>
</table>

Initial setting: LARGE (for the front speakers)  SMALL (for other speakers)
Setting the surround back speaker(s) — S BACK OUT
Register the number of the surround back speaker(s).

S BACK OUT: 1SPK Select when you use 1 surround back speaker.
S BACK OUT: 2SPK Select when you use 2 surround back speakers.

Initial setting: S BACK OUT: 2SPK

NOTES
• You cannot set the speaker distance for the speakers you have set to "NO."
• If you have selected "S BACK OUT: 1SPK" for "S BACK OUT" (see the left column), "SB SPK DIST." appears instead of "SBL SPK DIST. and "SBR SPK DIST."

Setting the speaker distance
The distance from your listening point to the speakers is one of the important elements to obtain the best possible sound effect from the Surround/DSP modes.
By referring to the speaker distance, the receiver automatically sets the delay time of the sound through each speaker so that sounds through all the speakers can reach you at the same time.

Measuring unit — DISTANCE UNIT
Select which measuring unit you use.

DISTANCE UNIT: meter Select to set the distance in meters.
DISTANCE UNIT: feet Select to set the distance in feet.

Initial setting: DISTANCE UNIT: meter

Speaker distance —
FL SPK DIST. (for the left front speaker),
FR SPK DIST. (for the right front speaker),
C SPK DIST. (for the center speaker),
SL SPK DIST. (for the left surround speaker),
SR SPK DIST. (for the right surround speaker),
SBL SPK DIST. (for the left surround back speaker),
SBR SPK DIST. (for the right surround back speaker)
Adjustable range: 0.3 m to 9.0 m in 0.3 m intervals
(1 ft to 30 ft in 1 ft intervals)
Initial setting: 3.0 m (10 ft) for all speakers

In this case, set the distance as follows:
Left front speaker (FL): "FL SPK DIST.: 3.0m (10ft)"
Right front speaker (FR): "FR SPK DIST.: 3.0m (10ft)"
Center speaker (C): "C SPK DIST.: 3.0m (10ft)"
Left surround speaker (SL): "SL SPK DIST.: 2.7m (9ft)"
Right surround speaker (SR): "SR SPK DIST.: 2.7m (9ft)"
Left surround back speaker (SBL): "SBL SPK DIST.: 2.4m (8ft)"
Right surround back speaker (SBR): "SBR SPK DIST.: 2.4m (8ft)"

NOTES
• You cannot set the speaker distance for the speakers you have set to "NO."
• If you have selected "S BACK OUT: 1SPK" for "S BACK OUT" (see the left column), "SB SPK DIST." appears instead of "SBL SPK DIST. and "SBR SPK DIST."

Selecting the main or sub channel—DUAL MONO

You can select the playback sound (channel) you want while playing digital software recorded (or broadcasted) in Dual Mono mode (see page 42), which includes two monaural channels separately. When the receiver detects Dual mono signals, the DUAL MONO indicator lights up on the display.

**DUAL MONO: MAIN**
Select to play back the main channel (Ch 1).*
Signal indicator “L” lights up while playing back this channel.

**DUAL MONO: SUB**
Select to play back the sub-channel (Ch 2).*
Signal indicator “R” lights up while playing back this channel.

**DUAL MONO: ALL**
Select to play back both the main and sub-channels (Ch 1/Ch 2).*
Signal indicators “L” and “R” light up while playing back these channels.

Initial setting: DUAL MONO: MAIN
* Dual Mono signals can be heard from the following speakers—L (left front speaker), R (right front speaker), and C (center speaker), with respect to the current Surround setting:

**NOTE**
The Dual Mono format is not identical with bilingual broadcasting for TV programs. So this setting does not take effect while watching such bilingual programs.

Setting bass sound—SUBWFR OUT

The subwoofer emits the LFE signals* and the bass elements of each speaker set to “SMALL.” You can make the bass elements of the front speaker channels (MAIN) emitted through the subwoofer.

**SUBWFR OUT: LFE**
Select to emit the LFE signals and the bass elements of each speaker set to “SMALL.”

**SUBWFR OUT: LFE+MAIN**
Select to emit the bass elements of the front speakers’ channels (MAIN) when no bass elements are emitted through the subwoofer in “SW: LFE.”

Initial setting: SUBWFR OUT: LFE
* When “SUBWOOFER” is set to “SUBWOOFER: NO” (see page 28), this function is not available.

* The LFE signals are emitted only when playing the following software with the LFE signals:
  - Dolby Digital multi channel software
  - DTS multi channel software
When playing analog source or linear PCM software, no LFE signals are emitted.
Setting the digital input (DIGITAL IN) terminals—DIGITAL IN 1/2/3

When you use the digital input terminals, register what components are connected to which terminals—DIGITAL IN 1/2/3 (see page 16) so that the correct source name will appear when you select the digital source.

Select one of the following components for each terminal:

- **DVR/DVD**
  - For the DVD player (or DVD recorder).
- **DBS**
  - For the DBS tuner.
- **VCR**
  - For the VCR.
- **TV**
  - For the TV.

**Initial setting:**
- For “DIGITAL IN 1”: DVR/DVD
- For “DIGITAL IN 2”: DBS
- For “DIGITAL IN 3”: VCR

**NOTES**

- You cannot assign the same component for different terminals.
- The priority order for assignment is as follows: “DIGITAL IN 1” > “DIGITAL IN 2” > “DIGITAL IN 3.”
  - Ex.: When “DIGITAL IN 1” is set to “DVR/DVD.”
    - For “DIGITAL IN 2,” “DBS,” “VCR,” and “TV” are selectable.
      - In this case, “VCR” is selected.
    - For “DIGITAL IN 3,” “DBS” and “TV” are selectable.

- Setting “DIGITAL IN 1” affects “DIGITAL IN 2” and “DIGITAL IN 3” settings. When you have changed “DIGITAL IN 1,” confirm the components assigned to “DIGITAL IN 2” and “DIGITAL IN 3.”

Setting the crossover frequency—CROSSOVER

Small speakers cannot reproduce the bass sounds efficiently. If you use a small speaker in any position, this receiver automatically reallocates the bass sound elements assigned to the small speaker to the large speakers.

To use this function properly, set this crossover frequency level according to the size of the small speaker connected.

- If you have selected “LARGE” for all speakers (see page 28), this function will not take effect (“CROSS OFF” appears).

**CROSSOVER:**
- **80Hz**
  - Select when the cone speaker unit built in the speaker is about 12 cm (4 3/4 inches).
- **100Hz**
  - Select when the cone speaker unit built in the speaker is about 10 cm (3 15/16 inches).
- **120Hz**
  - Select when the cone speaker unit built in the speaker is about 8 cm (3 3/16 inches).

**Initial setting:** CROSSOVER: 100Hz

**NOTE**

Crossover frequency is not valid for the HEADPHONE and 3D HEADPHONE modes.

Setting the low frequency effect attenuator—LFE ATT

If the bass sound is distorted while playing back software encoded with Dolby Digital or DTS, set the LFE level to eliminate distortion.

- This function takes effect only when the LFE signals come in.

**LFE ATT:**
- **0dB**
  - Normally select this.
- **–10dB**
  - Select when the bass sound is distorted.

**Initial setting:** LFE ATT: 0dB

Using the Midnight mode—MIDNIGHT

You can enjoy a powerful sound at night using the Midnight mode. When the Midnight mode is activated, the MIDNIGHT indicator lights up on the display.

**MIDNIGHT:**
- **OFF**
  - Select when you want to enjoy surround with its full dynamic range. (No effect applied.)
- **1**
  - Select when you want to reduce the dynamic range a little.
- **2**
  - Select when you want to apply the compression effect fully (useful at night).

**Initial setting:** MIDNIGHT: OFF

**From the remote control:**

Press MIDNIGHT repeatedly to select either one of the above.

Setting the audio delay level—AUDIO DELAY

Synchronization between audio and video reproduction can be possibly disturbed because video signal decoding is time-consuming compared to the audio signal decoding.

On this setting, you can correct synchronization between video and audio signals by delaying the audio signal timing.

**Adjustable range:** OFF and 10 ms to 100 ms (in 10 ms intervals)

**Initial setting:** AUDIO DELAY: OFF
Memorizing the volume level for each source—ONE TOUCH OP

This receiver memorizes some settings separately for each source. In addition, you can store the volume level for each source with the other memorized settings. (See page 22.)

- When you turn off the power, and
- When you change the source.

ONE TOUCH OP: ON
Select to store the volume level separately for each source. (The ONE TOUCH OPERATION indicator lights up on the display.)

ONE TOUCH OP: OFF
Select this not to store the volume level.

Initial setting: ONE TOUCH OP: OFF

To recall the volume level
With the ONE TOUCH OPERATION indicator lit, the volume level for the currently selected source is recalled when the source is selected.

To cancel the One Touch Operation
Set One Touch Operation to “ONE TOUCH OP: OFF” so that the ONE TOUCH OPERATION indicator goes off from the display.

Selecting the output video signals
—VIDEO OUTPUT

To use the video conversion function (see page 9), you need to select this setting according to the connection method for a TV.

VIDEO OUTPUT: HDMI
Select this when connecting a TV with the HDMI cable.

VIDEO OUTPUT: CMPNT
Select this when connecting a TV with the component video cable.

VIDEO OUTPUT: S
Select this when connecting a TV with the S-video cable.

VIDEO OUTPUT: C
Select this when connecting a TV with the composite video cable.

Initial setting: VIDEO OUTPUT: HDMI

NOTE
To transmit the video signals selected in this setting, you need to connect a TV and this receiver with the cable which can transmit the selected video signals.

Superimposing the menus
—SUPERIMPOSE

You can select whether or not to superimpose the on-screen display on the TV screen.

SUPERIMPOSE: ON
Select to superimpose the on-screen display on the TV screen.

SUPERIMPOSE: OFF
Select to cancel superimposition. The on-screen display will be shown on the blue background screen.

Initial setting: SUPERIMPOSE: ON

NOTES

- Some on-screen displays appear on the TV screen regardless of this setting.
- When the video input setting (see page 20) is set to “CMPNT,” the on-screen display will be shown on the blue background screen even though “SUPERIMPOSE” is set to “SUPERIMPOSE: ON.”
- The on-screen display does not appear on the TV screen when the video input setting (see page 20) is set to “HDMI.”

Selecting the source for HDMI terminal and COMPONENT VIDEO jacks—HDMI SELECT/ CMPNT SELECT

When you connect a VCR or a DBS tuner to the VCR (DBS) IN terminal (jacks) in HDMI terminal or COMPONENT VIDEO jacks on the rear of the receiver, you need to select either “VCR” or “DBS” according to the component you connect. If you have not selected appropriate source, you cannot view the playback picture on the TV.

For the HDMI terminal:

HDMI SELECT: VCR
Select this when assigning the HDMI terminal for a VCR.

HDMI SELECT: DBS
Select this when assigning the HDMI terminal for a DBS tuner.

Initial setting: HDMI SELECT: VCR

For the COMPONENT VIDEO jacks:

CMPNT SELECT: VCR
Select this when assigning the COMPONENT VIDEO jacks for a VCR.

CMPNT SELECT: DBS
Select this when assigning the COMPONENT VIDEO jacks for a DBS tuner.

Initial setting: CMPNT SELECT: VCR
Sound adjustments

You can make sound adjustment to your preference after completing basic setting.

Basic adjustment items

You can adjust the following items. See pages in parentheses for details.
- You cannot select the items which is not available with the current setting.
- The name of the item shown below is the on-screen display indication and the name in parentheses is the display indication.

<table>
<thead>
<tr>
<th>Items</th>
<th>To do</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUBWOOFER LEVEL*1</td>
<td>Adjust the subwoofer output level. (36)</td>

</tr>
</tbody>
</table>

*1 You can adjust these items directly from the remote control.
*2 If you have used Smart Surround Setup on pages 23 and 24, these settings are not required.

NOTE

Some items are not available when multi channel PCM (see page 42) signals recorded in DVD-Audio are coming. See page 12 for details.

Operation through on-screen display menus

You can make adjustments to the basic settings easily by using the on-screen display menus.

Menu operation buttons

On the front panel:

<table>
<thead>
<tr>
<th>Button / JOG</th>
<th>To do</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADJUST button</td>
<td>show adjustment item previously selected.</td>
</tr>
<tr>

Setup menu configuration

- Items on the menus shown below are all set to the initial values when shipped from the factory.
- Some of the menus or some items on the menu cannot be shown or cannot be adjusted depending on the current settings and the connections. (For details, see the respective explanations in this section.)
- The “ADJUST MENU (2),” “ADJUST MENU (3),” and “ADJUST MENU (4)” screen cannot be shown depending on the current settings and the connections.

**ADJUST MENU (1)**
- **SUBWOOFER LEVEL**
- **FRONT L LEVEL**
- **FRONT R LEVEL**
- **CENTER LEVEL**
- **SURR L LEVEL**
- **SURR R LEVEL**
- **S BACK L LEVEL**
- **S BACK R LEVEL**

**ADJUST MENU (2)**
- **DIGITAL EQ 63Hz**
- **DIGITAL EQ 250Hz**
- **DIGITAL EQ 1kHz**
- **DIGITAL EQ 4kHz**
- **DIGITAL EQ 16kHz**
- **BASS BOOST**

Menu operating procedure

When operating, the on-screen display appears on the TV screen regardless of the SUPERIMPOSE setting (see page 32).

Before you start, remember...

There is a time limit in doing the following steps. If the setting is canceled before you finish, start from step 1 again.

In this section, the operation of the remote control is used for explaining.

Ex.: When adjusting subwoofer output level.

1 To start the adjustment, press ADJUST.

The setting item previously selected can be shown on the TV screen by pressing ADJUST on the front panel when the receiver is in normal operation mode.

<table>
<thead>

<tr>
<td>EXP EXIT</td>
<td>EXP EXIT</td>
<td></td>
</tr>
</tbody>
</table>

2 To select the desired submenu, press ▲ or ▼ repeatedly.

There are four screens from "ADJUST MENU (1)" to "ADJUST MENU (4)." To change the screen, simply pressing ▲ or ▼ repeatedly. You can go to the next/previous screen.

• On the front panel, turn MULTI JOG.

3 Press SET.

The selected submenu appears.

4 To select the appropriate setting, press ◀ or ▶ repeatedly, then press SET.

The on-screen display returns to the previous ADJUST MENU. In this example, "ADJUST MENU (1)" appears on the TV screen and "SUBWOFR LVL" appears on the display.

• On the front panel, turn MULTI JOG, then press SET.

5 Repeat steps 2 to 4 to set other items if necessary.

NOTE

To exit from menu operations, press EXIT on the remote control. On the front panel, press ADJUST.
From the remote control:

1. Press TEST to check the speakers’ output balance.
   - On the TV screen, “TEST TONE” appears. The indicator corresponding to the speaker appears while a test tone comes out of the speakers.
   - EX: On the display, “TEST L” starts flashing, and a test tone comes out of the speakers clockwise.
   - You can adjust the speaker output levels without the test tone.

2. Adjust the speaker output levels.
   - Press the + or – button corresponding to the speaker you want to adjust.

3. Press TEST again to stop the test tone.

NOTES
- No test tone comes out of the speakers for which the speaker setting is set to “NO” (see page 28).
- No test tone is available when the headphones are in use.
- If you have selected “S BACK OUT: 1SPK” for “S BACK OUT” (see page 29), press S. BACK L +/- to adjust the output level.

Adjusting the speaker output levels
- SUBWOOFER LEVEL (subwoofer output level),
- FRONT L LEVEL (left front speaker output level),
- FRONT R LEVEL (right front speaker output level),
- CENTER LEVEL (center speaker output level),
- SURR L LEVEL (left surround speaker output level),
- SURR R LEVEL (right surround speaker output level),
- S BACK L LEVEL (left surround back speaker output level),
- S BACK R LEVEL (right surround back speaker output level)

You can adjust the speaker output levels.
Adjust all the speakers’ output levels so that you can listen to the sounds from all the speakers at the same level.
- Once you have made an adjustment, it is memorized for each source.

Adjustable range: –10 (dB) to +10 (dB) (in 1 step intervals)
Initial setting: 0 (dB) for all speakers

NOTES
- If you have selected “NO” for a speaker (see page 28), the output level for the corresponding speaker is not adjustable.
- If you have selected “HDMI” or “A MULTI” in the audio input setting (see page 20), “S BACK LEVEL,” “S BACK L LEVEL,” and “S BACK R LEVEL” are not adjustable.
- If you have selected “S BACK OUT: 1SPK” for “S BACK OUT” (see page 29), “S BACK LEVEL” appears instead of “S BACK L LEVEL” and “S BACK R LEVEL.”
- While using the headphones, you can adjust only the left and right front speakers’ output level.
Adjusting the equalization patterns—DIGITAL EQ 63Hz/250Hz/1kHz/4kHz/16kHz
You can adjust equalization patterns in five frequency bands (center frequency: 63 Hz, 250 Hz, 1 kHz, 4 kHz, 16 kHz) for the front speakers.

- Once you have made an adjustment, it is memorized for each source.

Adjustable range: -8 (dB) to +8 (dB) (in 2 dB intervals)
Initial setting: 0 (dB) for all bands

- When adjustment is made, the DIGITAL EQ indicator lights up on the display.

If no adjustment is required, set all the frequency bands to “0 (dB).”
- The DIGITAL EQ indicator goes off from the display.

From the remote control:
Before you start, remember...
There is a time limit in doing the following steps. If the setting is canceled before you finish, start from step 1 again.

1. Press D. EQ FREQ repeatedly to select the band you want to adjust.
2. Press D. EQ LEVEL + or – to adjust the equalization pattern of the selected band.
3. Repeat steps 1 and 2 to adjust other bands.

Adjusting the bass sounds
■ Reinforcing the bass—BASS BOOST
You can boost the bass level—Bass Boost.
- Once you have made an adjustment, it is memorized for each source.
- You cannot adjust this item directly from the remote control.

BASS BOOST: ON Select to boost the bass level.
The B.BOOST indicator lights up on the display.
BASS BOOST: OFF Select to deactivate the Bass Boost.
Initial setting: BASS BOOST: OFF

NOTE
This function affects only the sound coming out through the front speakers.

■ Attenuating the input signal—INPUT ATT
When the input level of analog source is too high, the sound will be distorted. If this happens, you need to attenuate the input signal level to prevent the sound distortion.
- Once you have made an adjustment, it is memorized for each source.
- You cannot adjust this item directly from the remote control.

INPUT ATT: ON Select to attenuate the input signal level.
The INPUT ATT indicator lights up on the display.
INPUT ATT: NORMAL Select to deactivate attenuation.

Initial setting: INPUT ATT: NORMAL

Adjusting the sound parameters for the Surround/DSP modes
You can adjust the Surround/DSP sound parameters to your preference.
- For details about the Surround/DSP modes, see pages 41 to 43.

■ Adjusting the effect level for DSP modes—EFFECT
This setting is available only when one of the DSP modes (except ALL CH STEREO) is in use. To activate DSP mode, see page 45.
- Once you have made an adjustment, it is memorized for each DSP mode.

Adjustable range: 1 to 5 (in 1 step intervals)
Initial setting: EFFECT: 3
As the number increases, the effect becomes stronger.
Normally, select “3.”

From the remote control:
Press EFFECT repeatedly to select the level you want to adjust.

■ Adjusting the virtual room size for DSP modes—ROOM SIZE
This setting is available only when one of the DSP modes (except ALL CH STEREO) is in use. To activate DSP mode, see page 45.
- “SURROUND SPK” is set to “NO” (see page 28), this item is not adjustable.
- Once you have made an adjustment, it is memorized for each DSP mode.
- You cannot adjust this item directly from the remote control.

Adjustable range: 1 to 5 (in 1 step intervals)
Initial setting: ROOM SIZE: 3
As the number increases, the interval between reflections increases so that you will feel as if you were in a larger room.
Normally, select “3.”
Adjusting the liveness effect for DSP modes—LIVENESS
This setting is available only when one of the DSP modes (except ALL CH STEREO) is in use. To activate DSP mode, see page 45.
• If "SURROUND SPK" is set to "NO" (see page 28), this item is not adjustable.
• Once you have made an adjustment, it is memorized for each DSP mode.
• You cannot adjust this item directly from the remote control.
Adjustable range: 1 to 5 (in 1 step intervals)
Initial setting: LIVENESS: 3
As the number increases, the attenuation level of reflections over time decreases so that acoustics change from "Dead" to "Live." Normally, select "3."

Adjusting the panorama control for Pro Logic IIx Music and Pro Logic II Music—PANORAMA
This setting is available when Pro Logic IIx Music or Pro Logic II Music is activated for the analog or digital 2-channel sound signal. To activate Pro Logic IIx Music or Pro Logic II Music, see page 45.
• Once you have made an adjustment, it is memorized until you change the setting.
• You cannot adjust this item directly from the remote control.

Initial setting: PANORAMA: OFF
Select to add "wraparound" sound effect with side-wall image.

Press C. TONE repeatedly to select the level you want to adjust.

Adjusting the sound localization position for Pro Logic IIx Music and Pro Logic II Music—DIMENSION
This setting is available when Pro Logic IIx Music or Pro Logic II Music is activated for the analog or digital 2-channel sound signal. To activate Pro Logic IIx Music or Pro Logic II Music, see page 45.
• Once you have made an adjustment, it is memorized until you change the setting.
• You cannot adjust this item directly from the remote control.
Adjustable range: 1 to 7 (in 1 step intervals)
Initial setting: DIMENSION: 4
As the number increases, the sound localization moves towards forward from backward. Normally, select "4."

Adjusting the sound localization of the center channel—CENTER GAIN
This setting is available only when Neo:6 Music is in use.
• If "CENTER SPK" is set to "NO" (see page 28), this item is not adjustable.
• Once you have made an adjustment, it is memorized until you change the setting.
• You cannot adjust this item directly from the remote control.
Adjustable range: 0 to 1.0 (in 0.1 step intervals)
Initial setting: CENTER GAIN: 0.3
As the number increases, the center channel will be localized clearly. Normally, select "0.3."

Adjusting the center tone—CENTER TONE
This setting is available when one of the Surround/DSP modes is in use. To activate Surround/DSP mode, see page 45.
• If "CENTER SPK" is set to "NO" (see page 28), this item is not adjustable.
• This setting is common to all Surround modes, and is memorized separately for DSP modes.
Adjustable range: 1 to 5 (in 1 step intervals)
Initial setting: CENTER TONE: 3
As the number increases, the dialogue becomes stronger. Normally, select "3."
• When the center tone is set to other than "CENTER TONE: 3," the C.TONE indicator lights up on the display.

Aligning the vertical localization of the center channel for Surround/DSP modes—CNTR ALIGNMENT
This setting is available when one of the Surround/DSP modes (except PLIIx MUSIC, PLII MUSIC, NEO:6 MUSIC, and ALL CH STEREO) is in use. To activate Surround/DSP mode, see page 45.
• If "CENTER SPK" is set to "NO" (see page 28), this item is not adjustable.
• Once you have made an adjustment, it is memorized for each Surround/DSP mode.
• You cannot adjust this item directly from the remote control.

Initial setting: CNTR ALIGNMENT: ON
Select this when you cannot feel as if the actors or singers are speaking or singing on the screen.

CNTR ALIGNMENT: OFF
Center alignment is turned off.

Initial setting: CNTR ALIGNMENT: OFF
Tuner operations

Tuner operations are mainly done from the remote control.

From the remote control ONLY:

1 Press FM/AM to select the band.
   The last received station of the selected band is tuned in.
   • Each time you press the button, the band alternates between “FM” and “AM.”

2 Press repeatedly or hold TUNING or TUNING until the station you want is tuned in.
   • Pressing (or holding) TUNING increases the frequency.
   • Pressing (or holding) TUNING decreases the frequency.

NOTES
   • When you hold and release TUNING or TUNING, the frequency keeps changing until a station is tuned in.
   • When a station of sufficient signal strength is tuned in, the TUNED indicator lights up on the display.
   • When an FM stereo program is received, the STEREO indicator also lights up.

Using preset tuning

Once a station is assigned a channel number, the station can be quickly tuned simply by selecting the number. You can preset up to 30 FM and 15 AM stations.

To store the preset stations

Before you start, remember...

There is a time limit in doing the following steps. If the setting is canceled before you finish, start from step 2 again.

From the remote control ONLY:

1 Tune in to the station you want to preset (see “Tuning in to stations manually” above).
   • If you want to store the FM reception mode for this station, select the FM reception mode you want. See “Selecting the FM reception mode” on page 40.

2 Press MEMORY.
   The channel number position starts flashing on the display for about 5 seconds.

NOTE

When you have selected “FM” or “AM” by using SOURCE SELECTOR on the front panel, the remote control may not work for tuner operations. To use the remote control for tuner operations, select “FM” or “AM” by using FM/AM button on the remote control.

CONTINUED ON THE NEXT PAGE
3 Press the numeric buttons (1 – 10, +10) to select a channel number while the channel number position is flashing.
   • For channel number 5, press 5.
   • For channel number 15, press +10, then 5.
   • For channel number 30, press +10, then 5.

4 Press MEMORY again while the selected channel number is flashing on the display.
   The selected channel number stops flashing.
   The station is assigned to the selected channel number.

5 Repeat steps 1 to 4 until you store all the stations you want.

To erase a stored preset station
Storing a new station on a used channel number erases the previously stored one.

To tune in a preset station
From the remote control:

1 Press FM/AM to select the band.
   The last received station of the selected band is tuned in and the numeric buttons now work for tuner operations.
   • Each time you press the button, the band alternates between “FM” and “AM.”

2 Press the numeric buttons (1 – 10, +10) to select a preset channel number.
   • For channel number 5, press 5.
   • For channel number 15, press +10, then 5.
   • For channel number 30, press +10, then 10.

On the front panel:

Before you start, remember...
There is a time limit in doing the following steps. If the setting is canceled before you finish, start from step 2 again.

1 Turn SOURCE SELECTOR to select “FM” or “AM.”
   The last received station of the selected band is tuned in.

2 Press TUNER PRESET.
   “P” appears on the display, and MULTI JOG now works for selecting preset channels.

3 Turn MULTI JOG to select a preset channel number.
   • To increase the preset channel numbers, turn MULTI JOG clockwise.
   • To decrease the preset channel numbers, turn MULTI JOG counterclockwise.

Selecting the FM reception mode
When an FM stereo broadcast is hard to receive or noisy, you can change the FM reception mode while receiving an FM broadcast.
   • You can store the FM reception mode for each preset station (see page 39).

From the remote control ONLY:
While listening to an FM station, press FM MODE.
   • Each time you press the button, the FM reception mode alternates between “AUTO MUTING” and “MONO.”

   AUTO MUTING
   Normally select this.
   When a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sound. This mode is also useful to suppress static noise between stations. The AUTO MUTING indicator lights up on the display.

   MONO
   Select this to improve the reception (but stereo effect will be lost).
   In this mode, you will hear noise while tuning in to the stations. The AUTO MUTING indicator goes off from the display. (The STEREO indicator also goes off.)

Initial setting: AUTO MUTING
Creating realistic sound fields

Reproducing theater ambience

In a movie theater, many speakers are located on the walls to reproduce impressive multi-channel sound, reaching you from all directions. With these many speakers, sound localization and sound movement can be expressed. Surround/DSP modes built in this receiver can create almost the same Surround sound as you can feel in a real movie theater.

Introducing the Surround modes

■ Dolby Digital*

Dolby Digital is a digital signal compression method, developed by Dolby Laboratories, and enables multi-channel encoding and decoding.
- When Dolby Digital signal is detected through the digital input, the [DIGITAL] indicator lights up on the display.

Dolby Digital 5.1CH

Dolby Digital 5.1CH (DOLBY DIGITAL) encoding method records and digitally compresses the left front channel, right front channel, center channel, left surround channel, right surround channel, and LFE channel signals (total 6 channels, but the LFE channel is counted as 0.1 channel. Therefore, called 5.1 channel). Dolby Digital enables stereo surround sounds, and sets the cutoff frequency of the surround treble at 20 kHz, compared to 7 kHz for Dolby Pro Logic. As such, the sound movement and "being-there" feeling are enhanced much more than Dolby Pro Logic.

Dolby Digital EX

Dolby Digital EX (DOLBY D EX) is a digital surround encoding format that adds the third surround channels, called "surround back." Compared to the conventional Dolby Digital 5.1CH, these newly added surround back channels can reproduce more detailed movements behind you while viewing the video software. In addition, surround sound localization will become more stable.

■ Dolby Surround

Dolby Pro Logic II

Dolby Pro Logic II is a multi-channel playback format to convert 2-channel software into 5-channel (plus subwoofer). The matrix-based conversion method used for Dolby Pro Logic II makes no limitation for the cutoff frequency of the surround treble and enables stereo surround sound.
- This receiver provides three types of Dolby Pro Logic II modes—Pro Logic II Movie (PLII MOVIE), Pro Logic II Music (PLII MUSIC), and Pro Logic II Game (PLII GAME). When Dolby Pro Logic II is activated, the [PLII] indicator lights up on the display.

PLII MOVIE  Suitable for playing any Dolby Surround encoded software. You can enjoy a sound field very close to the one created with discrete 5.1-channel sounds.

PLII MUSIC  Suitable for playing any 2-channel stereo software. You can enjoy wide and deep sounds.

PLII GAME  Suitable for playing a video game. You can enjoy sounds with "being there" feeling.

* Manufactured under license from Dolby Laboratories. “Dolby”, “Pro Logic”, and the double-D symbol are trademarks of Dolby Laboratories.

CONTINUED ON THE NEXT PAGE
**Dolby Pro Logic IIx**

Dolby Pro Logic IIx is a newly introduced multi-channel playback format to convert not only multi-channel software but 2-channel software into 7.1 channel (or 6.1 channel) that developed from Dolby Pro Logic II. The matrix-based conversion method used for Dolby Pro Logic IIx makes no limitation for the cutoff frequency of the surround treble.

- This receiver provides three types of Dolby Pro Logic Iix modes—Pro Logic IIx Movie (PLIIx MOVIE), Pro Logic IIx Music (PLIIx MUSIC), and Pro Logic IIx Game (PLIIx GAME). When Dolby Pro Logic IIx is activated, “PLIIx MOVIE,” “PLIIx MUSIC,” or “PLIIx GAME” appear and the PLIIx indicator lights up on the display.

**PLIIx MOVIE** Suitable for playing any Dolby Surround encoded software. You can enjoy a sound field with a natural wraparound effect.

**PLIIx MUSIC** Suitable for playing any 2-channel stereo software. You can enjoy wide and deep 7.1-channel sounds.

**PLIIx GAME** Suitable for playing a video game. You can enjoy 7.1-channel sounds with “being there” feeling. This mode is available for both an analog and digital 2-channel signal.

- To enjoy software encoded with Dolby Digital, connect the source component using the digital terminal on the rear of this receiver. (See page 16.)

**DTS Neo:6**

DTS is another digital signal compression method, developed by Digital Theater Systems, Inc., and enables multi-channel encoding and decoding (1ch up to 6.1ch).

When DTS signal is detected through the digital input, the DTS indicator lights up on the display.

**DTS Digital Surround**

DTS Digital Surround (DTS) is another discrete 5.1 channel digital audio format available on CD, LD, and DVD software. Compared to Dolby Digital, the DTS Digital Surround format has a lower audio compression rate which enables it to add breadth and depth to the sounds reproduced. As such, DTS Digital Surround features natural, solid, and clear sound.

**DTS Extended Surround (DTS-ES)**

DTS-ES is another multi-channel digital encoding format. It greatly improves the 360-degree surround impression and space expression by adding the third surround channel—surround back channel.

DTS-ES includes two signal formats with different surround signal recording methods—DTS-ES Discrete 6.1ch (ES DISCRETE) and DTS-ES Matrix 6.1ch (ES MATRIX). DTS-ES Discrete 6.1ch has been designed to encode (and decode) a 6.1-channel signal discretely to avoid interference with each channel. DTS-ES Matrix 6.1ch has been designed to add an extra surround channel to DTS Digital Surround 5.1-channel. By using a matrix encoding/decoding method, an additional “surround back” channel signal is encoded (and decoded) in both the left and right surround channel signals.

**DTS 96/24**

In recent years, there has been increasing interest in higher sampling rates both for recording and for reproducing at home. Higher sampling rates allow wider frequency range and greater bit depths provide extended dynamic range.

DTS 96/24 is a multi-channel digital signal format (fs 96 kHz/24 bits) introduced by Digital Theater Systems, Inc. to deliver “better-than-CD sound quality” into the home.

- When DTS 96/24 signal is detected, the DTS 96/24 indicator lights up. You can enjoy its 5.1-channel sound with full-quality.

**DTS Neo:6**

DTS Neo:6 is another conversion method to create 6-channel (plus subwoofer) from an existing 2-channel source by using the high precision digital matrix decoder used for DTS-ES Matrix 6.1ch.

- This receiver provides the following DTS Neo:6 modes—Neo:6 Cinema (NEO:6 CINEMA) and Neo:6 Music (NEO:6 MUSIC).

When one of them is activated, the NEO:6 indicator lights up on the display.

**NEO:6 CINEMA** Suitable for playing movies. You can get the same atmosphere with 2-channel software as well as 6.1-channel software. It is also effective for playing software encoded with conventional surround formats.

**NEO:6 MUSIC** Suitable for playing music software. The front channel signals bypass the decoder (resulting in no loss of sound quality) and the surround signals transmitted through the other speakers expand the sound field naturally.

When using Surround mode, the sounds come out of the activated speakers which the Surround mode requires.

- If either “SURROUND SPK” or “CENTER SPK” is set to “NO” in the speaker setting (see page 28), the corresponding channel signals are allocated to and emitted through the front speakers.

- If both “SURROUND SPK” and “CENTER SPK” are set to “NO” in the speaker setting (see page 28), JVCE’s original 3D-PHONIC processing (which has been developed to create the surround effect through the front speakers only) is used. The 3D-PHONIC indicator lights up on the display.

**About other digital signals**

**Linear PCM**

Uncompressed digital audio data used for DVDs, CDs, and Video CDs.

- DVDs support 2 channels with sampling rates of 48/96 kHz, at quantization of 16/24 bits. On the other hand, CDs and Video CDs are limited to 2 channels with 44.1 kHz at 16 bits.

- When Linear PCM signal is detected, the LINEAR PCM indicator lights up.

**Multi channel PCM**

Uncompressed multi channel digital audio data used for DVD-Audios.

DVD-Audios support up to 5.1 channels with sampling rates of 44.1/48/88.2/96 kHz and 2 channels with sampling rates of 44.1/48/88.2/96/176/192 kHz, at quantization of 16/20 bits.

- When Multi channel PCM signal is detected, the LINEAR PCM indicator lights up and “MULTI CH PCM” appears on the display for a while.

**Dual Mono**

Dual Mono can be easily understood when you think of the bilingual broadcast for TV programs (however, the Dual Mono format is not identical with those analog formats). This format is now adopted in Dolby Digital, DTS, and so on. It allows two independent channels (called main channel and sub-channel) to be recorded separately.

- You can select either channel you want to listen to (see page 30).
Introducing the DSP modes

The sound heard in a concert hall, club, etc. consists of direct sound and indirect sound—early reflections and reflections from behind. Direct sounds reach the listener directly without any reflection. On the other hand, indirect sounds are delayed by the distances of the ceiling and walls. These direct sounds and indirect sounds are the most important elements of the acoustic surround effects.

The DSP modes can create these important elements, and give you a real "being there" feeling.

The DSP modes include the following modes:
- Digital Acoustic Processor (DAP) modes—HALL1, HALL2, LIVE CLUB, DANCE CLUB, PAVILION, THEATER1, THEATER2
- MONO FILM—Used for all types of 2-channel signals (including Dual Mono signal)
- All Channel Stereo mode (ALL CH STEREO)

When one of the DSP modes is activated, the DSP indicator lights up on the display.

Digital Acoustic Processor (DAP) modes

You can use the following DAP modes in order to reproduce a more acoustic sound field in your listening room.

HALL1 Reproduces the spatial feeling of a large shoebox-shaped hall designed primarily for classical concerts. (Its seating capacity is about 2000.)

HALL2 Reproduces the spatial feeling of a large vineyard-shaped hall designed primarily for classical concerts. (Its seating capacity is about 2000.)

LIVE CLUB Reproduces the spatial feeling of a live music club with a low ceiling.

DANCE CLUB Reproduces the spatial feeling of a rocking dance club.

PAVILION Reproduces the spatial feeling of an exhibition hall with a high ceiling.

THEATER1 Reproduces the spatial feeling of a large theater where the seating capacity is about 600.

THEATER2 Reproduces the spatial feeling of a small theater where the seating capacity is about 300.

NOTE
When "THEATER1" or "THEATER2" is activated while playing back 2-channel analog or digital source, the built-in Dolby Pro Logic II decoder is activated and the [X] Pl. II indicator lights up.

When using the DAP mode, the sounds come out of all the connected and activated speakers.
- If "SURROUND SPK" is set to "NO" in the speaker setting (see page 28), JVC’s original 3D-PHONIC processing (which has been developed to create the surround effect through the front speakers only) is used.
- The 3D-PHONIC indicator lights up on the display.

MONO FILM

In order to reproduce a more acoustic sound field in your listening room while viewing monaural sound video software (analog and 2-channel digital signals including Dual Mono signal), you can use this mode.

The surround effect will be added, and the sound localization of actor’s words will be improved.

This mode cannot be used for multi-channel digital signals.

When "MONO FILM" is used, sounds come out of all the connected (and activated) speakers.
- If "SURROUND SPK" is set to "NO" in the speaker setting (see page 28), JVC’s original 3D-PHONIC processing (which has been developed to create the surround effect through the front speakers only) is used.
- The 3D-PHONIC indicator lights up on the display.
- If incoming signals change from 2-channel digital signal to another digital signal type, "MONO FILM" is canceled and an appropriate Surround mode is activated.

All Channel Stereo mode (ALL CH STEREO)

This mode can reproduce a larger stereo sound field using all the connected (and activated) speakers.

This mode cannot be used if "SURROUND SPK" is set to "NO" in the speaker setting (see page 28).

3D HEADPHONE mode

If you connect a pair of headphones while one of the Surround/DSP modes is in use, the 3D HEADPHONE mode is activated without respect to the type of software played back. "3D HEADPHONE" appears on the display and the DSP and HEADPHONE indicators light up.
Using the Surround/DSP modes

Available Surround/DSP modes vary depending on the speaker settings and the incoming signals. See the table below.

- The numbers inside the parentheses following the incoming signal type indicate the number of the front channels and that of the surround channels. For example, (3/2) indicates that the signals are encoded with three front signals (left/right/center) and two (stereo) surround signals.
- For EX/ES/PLIIx setting, see page 30.
- Surround/DSP modes are not available when selecting “A MULTI” in the audio input setting (see page 20) or when multi channel PCM (see page 42) signals recorded in DVD-Audio are coming in.

<table>
<thead>
<tr>
<th>Incoming Signal Type</th>
<th>EX/ES/PLIIx setting</th>
</tr>

</tr>
</tbody>
</table>

*1 DTS 96/24 processing is not applied when the EX/ES/PLIIx setting is activated. If you want to apply the processing, set the EX/ES/PLIIx setting to “OFF” (see page 30).

*2 When “S BACK OUT” is set to “SB OUT: 1SPK,” D+PLII MOVIE is changed to DOLBY D EX and DTS+PLII MOVIE is changed to DTS EX.

*3 When “S BACK SPK” is set to “NO,” Virtual Surround Back is activated for the modes and the VIRTUAL SB indicator lights up on the display.

*4 When “S BACK SPK” is set to “NO,” PLII MOVIE, PLII MUSIC, and PLII GAME are changed to PLII MOVIE, PLII MUSIC, and PLII GAME respectively.

*5 For some Dolby Digital Surround EX software, Dolby Digital 5.1-channel reproduction ("DOLBY DIGITAL") may be applied even though you have selected “AUTO.” In this case, select “ON” to apply “DOLBY D EX.”

About the DSP modes

- The following DSP modes are available except when selecting “A MULTI” in the audio input setting (see page 20) or when multi channel PCM (see page 42) signals recorded in DVD-Audio are coming in.
- HALL1, HALL2, LIVE CLUB, DANCE CLUB, PAVILION, THEATER1, THEATER2.

- If an incoming signal is a multi-channel (more than 2 channel) digital signal, "MONO FILM" is not available.
- If "SURROUND SPK" is set to "NO," "ALL CH STEREO" is not available.

Virtual Surround Back

This function creates the great surround effect from the behind as if you have connected the surround back speaker. The VIRTUAL SB (Surround Back) indicator lights up on the display.

If you have connected (and activated) the surround speakers, you can use Virtual Surround Back without connecting the surround back speaker.

Virtual Surround Back is activated when EX/ES/PLIIx is set to other than "OFF" and when playing back the software including the following signals:
- Dolby Digital Surround EX
- DTS-ES
- Dolby Digital or DTS with 4-channels or more
Activating the Surround/DSP modes

Available Surround/DSP modes vary depending on the speaker settings and the incoming signals. For details, see page 44.

Activating one of the Surround/DSP modes automatically recalls the memorized settings and adjustments.

- To adjust the speaker output level, see page 36.
- When activating one of the Surround/DSP modes, you can adjust CENTER TONE. (see page 38)
- When activating one of the Surround/DSP modes (except PLiX MUSIC, PLii MUSIC, NEO:6 MUSIC, and ALL CH STEREO), you can adjust CNTR ALIGNMENT. (see page 38)
- When activating “NEO:6 MUSIC,” you can adjust CENTER GAIN. (see page 38)
- When activating the DSP mode (except ALL CH STEREO), you can adjust the following settings:
  - EFFECT (see page 37)
  - ROOM SIZE (see page 37)
  - LIVENESS (see page 38)
- When activating “PLiX MUSIC” and “PLii MUSIC”, you can adjust the following settings:
  - PANORAMA (see page 38)
  - CENTER WIDTH (see page 38)
  - DIMENSION (see page 38)

Selecting the Surround/DSP modes

From the remote control:

1. Select and play any source.
   - Surround/DSP modes are not available when selecting “A MULTI” in the audio input setting (see page 20) or when multi channel PCM (see page 42) signals recorded in DVD-Audio are coming in.
   - Make sure you have selected the input mode (analog or digital) correctly.

2. Press SURROUND repeatedly to select the Surround/DSP mode you want.
   - Automatically selected Surround/DSP modes
     - AUTO SURROUND*:1
     - HALL1 → HALL2 → LIVE CLUB → DANCE CLUB → PAVILION → THEATER1 → THEATER2 → MONO FILM → ALL CH STEREO
     - SURROUND OFF (Back to the beginning)
   - Available Surround modes vary depending on the speaker settings and the incoming signals. For details, see page 44.
   - If an incoming signal is a multi-channel (more than 2 channel) digital signal, “MONO FILM” is not available.
   - If “SURROUND SPK” is set to “NO.” “ALL CH STEREO” is not available.

To cancel Surround/DSP modes

Press SURROUND repeatedly so that “SURROUND OFF” appears on the display.
The AV COMPU LINK remote control system allows you to operate JVC’s video components (TV, DVD player*, and VCR) through this receiver.

This receiver is equipped with the AV COMPU LINK-III, which has added a function to operate JVC’s video components through the component video jacks. To use this remote control system, you need to connect the video components you want to operate, following the diagrams below and the procedures on page 47.

- Refer also to the manuals supplied with your video components.

* “DVD player” on pages 46 and 47 can be replaced with “DVD recorder.”

Connections 1: AV COMPU LINK connection

**NOTES**

- When connecting the receiver and a TV with the AV COMPU LINK EX terminal by using a component video cable, you cannot use Automatic selection of TV's input mode (see page 47).
- When connecting only the VCR and DVD player to this receiver, connect it directly to the receiver using cable with the monaural mini-plugs.
- You can connect only the TV with AV COMPU LINK EX or AV COMPU LINK-III terminal to the AV COMPU LINK-III terminal.

Connections 2: Video cable connection

This receiver is equipped with three types of the video terminals other than the HDMI terminals—composite video, S-video, and component video, and the signals coming into this receiver through one type of video terminals can output only through the terminal of the same type. So you need to connect the video components to this receiver using one of the following three ways.

- When using the AV COMPU LINK remote control system, set the video output and video input setting for the DVD player and the VCR correctly (see “Selecting the video input setting” on page 20 and “Selecting the output video signals—VIDEO OUTPUT” on page 32); otherwise, the correct input for this receiver will not be selected on the TV.

**IMPORTANT:**

The AV COMPU LINK remote control system cannot control the DBS tuner connected to the DBS IN jacks.

---

**Case 1:**
When connecting the source equipment to the receiver through the S-video terminals, connect this receiver to the TV’s video input 1 terminal using S-video cables.

**Case 2:**
When connecting the source equipment to the receiver through the composite video jacks, connect this receiver to the TV’s video input 2 terminal (composite video input) using composite video cables.

**Case 3:**
When connecting the source equipment to the receiver through the component video jacks, connect this receiver to the TV’s video input 2 terminals (component video input) using component video cables.
Connecting procedure

1. If you have already plugged your VCR, DVD player, TV, and this receiver into the AC outlets, unplug their AC power cords first.

2. Connect your VCR, DVD player, TV, and this receiver as follows, using the cables with the monaural mini-plugs (not supplied).
   - See “Connections 1” on the previous page.

3. Connect the audio input/output jacks on the VCR, DVD player, TV, and this receiver using the audio cables.
   - See pages 10 to 13.

4. Connect the video input/output jacks on the VCR, DVD player, TV, and this receiver using the S-video cables, composite video cables, or component video cables.
   - See “Connections 2” on the previous page.

5. Plug the AC power cords of the connected components and this receiver into the AC outlets.

6. When turning on the TV for the first time after the AV COMPU LINK connection, turn the TV volume to the minimum using the TV volume control on the TV.

7. Turn on other connected components first, then turn on this receiver.
   - When turning on the VCR, use the remote control supplied with this receiver (press VCR ON/OFF).

The AV COMPU LINK remote control system allows you to use the five basic functions listed below.

Remote control of the TV, DVD player, and VCR using this remote control

See pages 48 and 49 for details.
- Aim the remote control directly at the remote sensor on each component.

One-touch video play

Simply by inserting a video cassette without its safety tab into the VCR, you can enjoy the video playback without setting other switches manually. The receiver automatically turns on and changes the source to “VCR.” The TV automatically turns on and changes the input mode to the appropriate position so that you can view the playback picture.
When you insert a video cassette with its safety tab, press the play (►) button on the VCR or on the remote control. So, you can get the same result.

One-touch DVD play

Simply by starting playback on the DVD player, you can enjoy the DVD playback without setting other switches manually. The following is set automatically:
- Turning on the receiver.
- Changing the source to “DVR/DVD.”
- The TV automatically turns on and changes the input mode to the appropriate position so that you can view the playback picture.

Automatic selection of TV’s input mode

- When you select “TV” as the source to play on the receiver, the TV automatically changes the input mode to the TV tuner so that you can watch TV.
- When you select “DVR/DVD,” “VCR,” “DBS,” or “AUX” as the source to play on the receiver with “VIDEO OUTPUT” (see page 32) set to the setting other than “VIDEO OUTPUT: HDMI,” the TV automatically changes the input mode to the appropriate position (either video input 1 or video input 2) so that you can view the playback picture.

NOTE
This function does not work when you connect this receiver and the TV with the AV COMPU LINK EX terminal using a component video cable. In this case, reconnect the TV referring to Case 1 or Case 2 on page 46.

Automatic power on/off

The TV, DVD player, and VCR turn on and off along with the receiver.
- When you turn on the receiver;
  - If the previously selected source is “TV” or “DBS,” only the TV will turn on automatically.
  - If the previously selected source is “DVR/DVD,” the TV and DVD player will turn on automatically.
  - If the previously selected source is “VCR,” the TV and VCR will turn on automatically.
- When you turn off the receiver, the TV, DVD player, and VCR will turn off.

NOTE
If you turn off the receiver while recording on the VCR, the VCR will not turn off, but continue recording.
Operating other JVC products

You can use the supplied remote control to operate not only this receiver but also other JVC products.

• Refer also to the manuals supplied with the other products.
  – Some JVC VCRs can accept two types of the control signals—remote codes “A” and “B.” This remote control can operate a VCR whose remote control code is set to “A.”
  – Some JVC DVD recorders can accept four types of the control signals. This remote control can operate a DVD recorder whose remote control code is set to the initial code. For details, refer to the manual supplied with the DVD recorder.
• To operate other products, aim the remote control directly at the remote sensor on the target product.

### TV

You can always perform the following operations:

- **TV VOL +/-**: Adjust the volume on the TV.
- **TV/VIDEO**: Change the input mode (either video input or TV tuner) on the TV.

After pressing TV, you can perform the following operations on the TV.

- **TV/SIRIUS**: Turn on or off the TV.
- **CHANNEL +/-**: Change the channel numbers.
- **1 – 9, 0, 100+ (+10)**: Select the channel numbers.
- **RETURN (10)**: Switch between the previous channel and the current channel.

### VCR

You can always perform the following operation:

- **VCR ON/OFF**: Turn on or off the VCR.

After pressing VCR, you can perform the following operations on the VCR.

- **CHANNEL +/-**: Change the channel numbers on the VCR.
- **1 – 9, 0**: Select the channel numbers on the VCR.
- **►**: Start playback.
- **■**: Stop playback.
- **II**: Pause playback. To release it, press ►.
- **FF**: Fast-wind a tape.
- **REW**: Rewind a tape.
- **◄**: Start recording.
- **► + II**: Enter recording pause. To start recording, press ►.

### SIRIUS radio

You can always perform the following operation:

- **TV/SIRIUS ON/OFF**: Turn on or off the SIRIUS radio.
- **CAT**: Change the category of the program.
- **CHANNEL +/-**: Change the channel numbers on the SIRIUS radio.
- **1 – 6, BAND**: Store or tune in to the preset channel.
- **MEMO**: Store information on the display of the SIRIUS radio.
- **SELECT**: Select an highlighted item on the display of the SIRIUS radio.
- **DISP**: Change the text size on the display of the SIRIUS radio.
- **PREV**: Return to the previous channel.

**NOTE**
The remote control may not operate properly for a SIRIUS radio other than KT-SR2000 (JVC SIRIUS radio).
After setting the mode selector correctly, you can perform the following operations on the DVD recorder or DVD player.

See the instructions supplied with the DVD recorder or DVD player for details.

### DVD recorder or DVD player

#### Changing the remote control code for DVD recorder

Some JVC DVD recorders can accept four types of the control signals. You can assign one of four codes to the remote control supplied with this receiver for operating your DVD recorder. For details, refer to the manual supplied with the DVD recorder.

Initial setting: 03

1. **Set the mode selector to “DVR.”**

2. **Press and hold DVR/DVD.**

3. **Press DVR/DVD.**

4. **Enter the remote control code you want using buttons 1 – 4, and 0.**

   EX.: To enter the code “2”, press 0, then 2.

<table>
<thead>
<tr>
<th>Code for DVR</th>
<th>Number to enter</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>01</td>
</tr>
<tr>
<td>2</td>
<td>02</td>
</tr>
<tr>
<td>3</td>
<td>03</td>
</tr>
<tr>
<td>4</td>
<td>04</td>
</tr>
</tbody>
</table>

5. **Release DVR/DVD.**

   Now, the remote control code has been changed.

---

You can always perform the following operation:

<table>
<thead>
<tr>
<th>DVR/DVD</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DVR/DVD</td>
<td>Turn on or off the DVD recorder or DVD player.</td>
</tr>
</tbody>
</table>

After pressing DVR/DVD, you can perform the following operations on the DVD recorder and DVD player.

- ▶: Start playback.
- ■: Stop playback.
- ▶■: Pause playback. To release it, press ▶.
- ◐: Skip to the beginning of the next chapter.
- ◐ ◐ ◐ ◐ ◐ ◐ ◐: Return to the beginning of the current (or previous) chapter.

**DVD MENU:** Display the menu recorded on discs.

After pressing DVR/DVD or DVD MENU, you can perform the following operations on the DVD recorder and DVD player.

- ▲▼▲▼: Select an item on the menu screen.
- SET: Enter the selected item, channel number, chapter/title number, or track number (if required).

Only for DVD recorder operations:

<table>
<thead>
<tr>
<th>CHANNEL +/−:</th>
<th>Change the channel numbers.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1–9, 0:</td>
<td>Select a channel number (while stopped) or a chapter/title number, track number (while playing back). Press SET to enter the number.</td>
</tr>
<tr>
<td>◐ ◐ ◐ ◐ ◐ ◐ ◐</td>
<td>Start recording.</td>
</tr>
<tr>
<td>◐ ◐</td>
<td>Enter recording pause. To start recording, press ▶.</td>
</tr>
</tbody>
</table>

Only for DVD player operations:

| 1 – 10, 0, +10: | Select a chapter/title number, track number, menu item, etc. |

If these buttons do not function normally, use the remote control supplied with your DVD recorder or DVD player. Refer also to the manuals supplied with the DVD recorder or DVD player for details.
Operating other manufacturers’ products

By changing the transmittable signals, you can use the supplied remote control to operate other manufacturers’ products.

- Refer also to the manuals supplied with the other products.
- To operate those components with the remote control, first you need to set the manufacturers’ codes each for the TV, VCR, CATV converter, DBS tuner, and DVD player.
- After replacing batteries of the remote control, set the manufacturers’ codes again.
- All the functions may not be assigned to the buttons in some equipment.

Changing the transmittable signals for operating a TV

1. Press and hold TV/SIRIUS \( \downarrow \uparrow \).
2. Press TV.
3. Enter the manufacturer’s code using buttons 1 – 9, and 0.
   - See “Manufacturers’ codes for TV” on the right.
4. Release TV/SIRIUS \( \downarrow \uparrow \).

Now, you can perform the following operations on the TV.

<table>
<thead>
<tr>
<th>TV VOL ( \uparrow \downarrow )</th>
<th>Adjust the volume on the TV.</th>
</tr>
</thead>
<tbody>
<tr>
<td>TV/VIDEO:</td>
<td>Change the input mode (either TV or VIDEO).</td>
</tr>
</tbody>
</table>

After pressing TV, you can perform the following operations on the TV.

| TV/SIRIUS \( \downarrow \uparrow \) | Turn on or off the TV. |
| CHANNEL \( \uparrow \downarrow \) | Change the channel numbers. |
| 1 – 9, 0, 100+ (+10):           | Select the channel numbers. |

See the instructions supplied with the TV for details.

5. Try to operate your TV by pressing TV/SIRIUS \( \downarrow \uparrow \).
   - When your TV turns on or off, you have entered the correct code.

If more than one code is listed for your brand of TV, try each one until the correct one is entered.

<table>
<thead>
<tr>
<th>Manufacturer</th>
<th>Codes</th>

</tr>
</tbody>
</table>

Initial setting: 01

Manufacturers’ codes are subject to change without notice. If they are changed, this remote control cannot operate the equipment.
Changing the transmittable signals for operating a VCR

1 Press and hold VCR \( \frac{\text{on}}{\text{off}} \).
2 Press VCR.
3 Enter the manufacturer’s code using buttons 1 – 9, and 0.
   See “Manufacturers’ codes for VCR” on the right.
4 Release VCR \( \frac{\text{on}}{\text{off}} \).

Now, you can perform the following operation on the VCR.

VCR \( \frac{\text{on}}{\text{off}} \): Turn on or off the VCR.

After pressing VCR, you can perform the following operations on the VCR.

CHANNEL \( \leftrightarrow \) : Change the channel numbers on the VCR.
1 – 10, \( 0, +10 \): Select the channel numbers on the VCR.
\( \uparrow \) : Start playback.
\( \downarrow \) : Stop playback.
\( \bullet \) : Pause playback.
FF: Fast-wind a tape.
REW: Rewind a tape.
\( \bullet \) + \( \uparrow \) : Start recording.
\( \bullet \) + \( \downarrow \) : Enter recording pause. To start recording, press this button then \( \uparrow \).

See the instructions supplied with the VCR for details.

5 Try to operate your VCR by pressing VCR \( \frac{\text{on}}{\text{off}} \).

When your VCR turns on or off, you have entered the correct code.

If more than one code is listed for your brand of VCR, try each one until the correct one is entered.

Manufacturers’ codes for VCR

<table>
<thead>
<tr>
<th>Manufacturer</th>

Manufacturers’ codes are subject to change without notice. If they are changed, this remote control cannot operate the equipment.
Changing the transmittable signals for operating a CATV converter or DBS tuner

1. Press and hold DBS/CATV \(\text{\&}/\text{\|}\).
2. Press DBS.
3. Enter the manufacturer’s code using buttons 1 – 9, and 0.
   See “Manufacturers’ codes for CATV converter” or “Manufacturers’ codes for DBS tuner” below.
4. Release DBS/CATV \(\text{\&}/\text{\|}\).
   Now, you can perform the following operation on the CATV converter or DBS tuner.

   **DBS/CATV \(\text{\&}/\text{\|}\)**: Turn on or off the CATV converter or DBS tuner.

   After pressing DBS, you can perform the following operations on the CATV converter or DBS tuner.

   **CHANNEL +/-**: Change the channel numbers on the CATV converter or DBS tuner.

   **1 – 10, 0, 100+ (+10)**: Select the channel numbers on the CATV converter or DBS tuner.

   See the instructions supplied with the CATV converter or DBS tuner for details.

5. Try to operate your CATV converter or DBS tuner by pressing DBS/CATV \(\text{\&}/\text{\|}\).
   When your CATV converter or DBS tuner turns on or off, you have entered the correct code.

   If more than one code is listed for your brand of CATV converter or DBS tuner, try each one until the correct one is entered.

Changing the transmittable signals for operating a DVD player

1. Set the mode selector to “DVD.”
2. Press and hold DVR/DVD \(\text{\&}/\text{\|}\).
3. Press DVR/DVD.
4. Enter the manufacturer’s code using buttons 1 – 9, and 0.
   See “Manufacturers’ codes for DVD player” below.
5. Release DVR/DVD \(\text{\&}/\text{\|}\).
   Now, you can perform the following operation on the DVD player.

   **DVR/DVD \(\text{\&}/\text{\|}\)**: Turn on or off the DVD player.

   - \(\text{\&}/\text{\|}\): Start playback.
   - \(\text{\&}/\text{\|}\): Return to the beginning of the current chapter (or fast-forward for some models).
   - \(\text{\&}/\text{\|}\): Skip to the beginning of the next chapter (or fast-reverse for some models).
   - \(\text{\&}/\text{\|}\): Stop playback.
   - \(\text{\&}/\text{\|}\): Pause playback.

   **DVD MENU**: Display the menu recorded on DVD VIDEO discs.

   **1 – 9, 0, +10**: Select the chapter number.

   After pressing DVR/DVD or DVD MENU, you can perform the following operations on the DVD recorder and DVD player.

   - \(\text{\&}/\text{\|}\): Select an item on the menu screen.
   - \(\text{\&}/\text{\|}\): Enter the selected item.

   See the instructions supplied with the DVD player for details.

6. Try to operate your DVD player by pressing DVR/DVD \(\text{\&}/\text{\|}\).
   When your DVD player turns on or off, you have entered the correct code.

Amplifier

**Output Power**

At stereo operation:

- **Front channels:** 150 W per channel, min. RMS, driven into 6 Ω at 20Hz to 20 kHz with no more than 0.8% total harmonic distortion.

At surround operation:

- **Front channels:** 150 W per channel, min. RMS, driven into 6 Ω at 1 kHz with no more than 0.8% total harmonic distortion.
- **Center channel:** 150 W, min. RMS, driven into 6 Ω at 1 kHz, with no more than 0.8% total harmonic distortion.
- **Surround channels:** 150 W per channel, min. RMS, driven into 6 Ω at 1 kHz, with no more than 0.8% total harmonic distortion.
- **Surround back channels:** 150 W per channel, min. RMS, driven into 6 Ω at 1 kHz, with no more than 0.8% total harmonic distortion.

Audio

**Audio Input Sensitivity/Impedance:**

- DVR/DVD, VCR, DBS: 330 mV/47 kΩ
- Audio Input (DIGITAL IN)*:
  - Coaxial: DIGITAL IN 1 (DVR/DVD): 0.5 V(p-p)/75 Ω
  - Optical: DIGITAL IN 2 (DBS), 3 (VCR): –21 dBm to –15 dBm (660 nm ±30 nm)
- USB: USB WIRELESS
- USB TERMINAL
  - Corresponding to Linear PCM, Dolby Digital, and DTS (with sampling frequency—32 kHz, 44.1 kHz, 48 kHz).

**Audio Output Level:**

- **DVR, VCR:** 330 mV
- **Signal-to-Noise Ratio (66 IHF/78 IHF):** 80 dB/62 dB
- **Frequency Response (6 Ω):** 20 Hz to 20 kHz (±1 dB)
- **Bass Boost:** +4 dB ±1 dB at 100 Hz
- **Equalization (at DSP operation):**
  - Center frequency: 63 Hz, 250 Hz, 1 kHz, 4 kHz, 16 kHz
  - Control range: ±8 dB

Video

**Video Input Sensitivity/Impedance:**

- Composite video: DVR/DVD, VCR, DBS: 1 V(p-p)/75 Ω
- S-video: DVR/DVD, VCR, DBS:
  - Y (luminance): 1 V(p-p)/75 Ω
  - C (chrominance, burst): 0.286 V(p-p)/75 Ω
- Component: DVR/DVD, VCR (DBS):
  - Y (luminance): 1 V(p-p)/75 Ω
  - Pс, Pr: 0.7 V(p-p)/75 Ω

**Video Output Level/Impedance:**

- Composite video: DVR, VCR, MONITOR OUT: 1 V(p-p)/75 Ω
- S-video: DVR, VCR, MONITOR OUT:
  - Y (luminance): 1 V(p-p)/75 Ω
  - C (chrominance, burst): 0.286 V(p-p)/75 Ω
- Component: MONITOR OUT:
  - Y (luminance): 1 V(p-p)/75 Ω
  - Pс, Pr: 0.7 V(p-p)/75 Ω

HDMI

**HDMI Input (Ver. 1.1):** VCR (DBS), DVR/DVD
**HDMI Output (Ver. 1.0):** MONITOR OUT

FM tuner (IFH)

**Tuning Range:** 87.5 MHz to 108.0 MHz
**Usable Sensitivity:**
- Monaural: 12.8 dB (1.2 μV/75 Ω)
- 50 dB Quieting Sensitivity:
  - Monaural: 16.0 dB (1.7 μV/75 Ω)
  - Stereo: 37.5 dB (20.5 μV/75 Ω)
**Stereo Separation at REC OUT:** 35 dB at 1 kHz

AM tuner

**Tuning Range:** 530 kHz to 1 710 kHz

General

**Power Requirements:** AC 120 V, 60 Hz
**Power Consumption:** 195 W (at operation)
1.0 W (in standby mode)
**Dimensions (W x H x D):** 435 mm x 91.5 mm x 371 mm (17 ⅜ inches x 3 ⅜ inches x 14 ⅜ inches)
**Mass:** 7.8 kg (17.2 lbs)

USB WIRELESS SYSTEM

The USB wireless transmitter supplied with this receiver supports Direct Sequence Spreading Spectrum (DSSS) using 2.4 GHz frequency band.
LIMITED WARRANTY

JVC COMPANY OF AMERICA ("JVC") warrants this product and all parts thereof, except as set forth below ONLY TO THE ORIGINAL RETAIL PURCHASER to be FREE FROM DEFECTIVE MATERIALS AND WORKMANSHIP from the date of original purchase for the period shown below. ("The Warranty Period")

| PARTS | 2 YRS | LABOR | 2 YRS |

THIS LIMITED WARRANTY IS VALID ONLY IN THE FIFTY (50) UNITED STATES, THE DISTRICT OF COLUMBIA AND IN THE COMMONWEALTH OF PUERTO RICO.

WHAT WE WILL DO:
If this product is found to be defective within the warranty period, JVC will repair or replace defective parts with new or rebuilt equivalents at no charge to the original owner. Such repair and replacement services shall be rendered by JVC during normal business hours at JVC authorized service centers. Parts used for replacement are warranted only for the remainder of the Warranty Period. All products may be brought to a JVC authorized service center on a carry-in basis. Color televisions with a screen size of 27" or greater qualify for in-home service. In such cases, a technician will come to your home and either repair the TV there or remove and return it if it cannot be repaired in your home.

WHAT YOU MUST DO FOR WARRANTY SERVICE:
Please do not return your product to the retailer.

Instead, return your product to the JVC authorized service center nearest you. If shipping the product to the service center, please be sure to package it carefully, preferably in the original packaging, and include a brief description of the problem(s). Please call 1-800-252-5722 to locate the nearest JVC authorized service center. Service locations can also be obtained from our website http://www.jvc.com. If your product qualifies for In-home service, the service representative will require clear access to the product.

If you have any questions concerning your JVC Product, please contact our Customer Care Center at 800-252-5722.

WHAT IS NOT COVERED:
1. This limited warranty provided by JVC does not cover:
   1. Products which have been subject to abuse, accident, alteration, modification, tampering, negligence, misuse, faulty installation, lack of reasonable care, or if repaired or serviced by anyone other than a service facility authorized by JVC to render such service, or if affixed to any attachment not provided with the product, or if the model or serial number has been altered, tampered with, defaced or removed;
   2. Initial installation, installation and removal from cabinets or mounting systems;
   3. Operational adjustments covered in the Owner's Manual, normal maintenance, video and audio head cleaning;
   4. Damage that occurs in shipment, due to act of God, and cosmetic damage;
   5. Signal reception problems and failures due to any power surge;
   6. Video Pick-up Tubes/CCD Image Sensors are covered for 90 days from the date of purchase;
   7. Accessories;
   8. Batteries (except that Rechargeable Batteries are covered for 90 days from the date of purchase);
   9. Products used for commercial purposes, including, but not limited to rental.

There are no express warranties except as listed above.

THE DURATION OF ANY IMPLIED WARRANTIES, INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY, IS LIMITED TO THE DURATION OF THE EXPRESS WARRANTY HEREIN.

JVC SHALL NOT BE LIABLE FOR ANY LOSS OF USE OF THE PRODUCT, INCONVENIENCE, OR ANY OTHER DAMAGES, WHETHER DIRECT, INCIDENTAL, OR CONSEQUENTIAL (INCLUDING WITHOUT LIMITATION DAMAGE TO TAPES, RECORDS OR DISCS) RESULTING FROM THE USE OF THIS PRODUCT, OR ARISING OUT OF ANY BREACH OF THIS WARRANTY, ALL EXPRESS AND IMPLIED WARRANTIES, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR PURPOSE, ARE LIMITED TO THE WARRANTY PERIOD SET FORTH ABOVE.

Some states do not allow the exclusion of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.
