

Thank you for purchasing a JVC HD Television. This Quick Setup Guide, will help you setup your television to receive HD programming.

Getting HD programming is as easy as 1, 2, 3...

There are 3 basic ways you can receive HD programming.

Notes:

- If you do not have a Digital STB (Set-Top Box), please refer to the enclosed TV instruction manual for regular connection.
- Connection **A** or **B** may incur additional cost for a monthly subscription.

A HD Digital Cable TV:
If your Cable TV provider offers HD programming you need to subscribe to it and obtain an HD Digital Cable Box from them.

B HD Digital Satellite TV:
If your Satellite TV provider offers HD programming you need to subscribe to it and obtain an HD Digital Satellite Box from them.

C HD Digital Terrestrial Broadcasting:
If you have a good enough signal with a UHF antenna, it is possible to receive digital terrestrial broadcasting in HD.

Notes:

- In general, weather conditions may have an effect on the signal.
- Ideally, it is best to use an outdoor antenna to get the best reception.
- Additional HDTV Antenna Reference Information can be obtained from www.antennaweb.org

Connecting your TV to an HD Signal

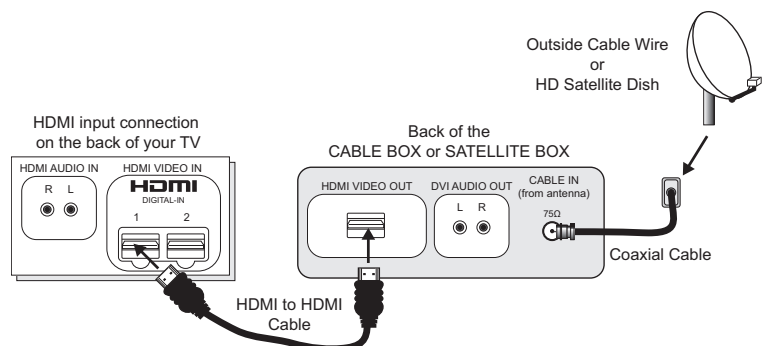

Notes:

- There are 4 methods for connecting an HD Source: (1 - 4) ordered based on best quality. Please choose only one.
- If you have an HD Cable or Satellite Box, refer to methods 1 - 3.
- If you can receive HD Digital Terrestrial Broadcasting, connect your antenna to the antenna input on the back of your TV. Please refer to method 4.
- You cannot view HD quality signals with Composite or S-Video cables (Y/C).
- All cables described here are sold separately. You can purchase JVC brand cables at www.jvcservice.com/store.

1 **HDMI to HDMI Cable connection** - This is the best possible connection if your HD Digital Cable Box or HD Digital Satellite Box has an HDMI output.

Note:

- Some Cable or Satellite Boxes may require additional connections to view other channels. Not all the channels are available via the HDMI connection.

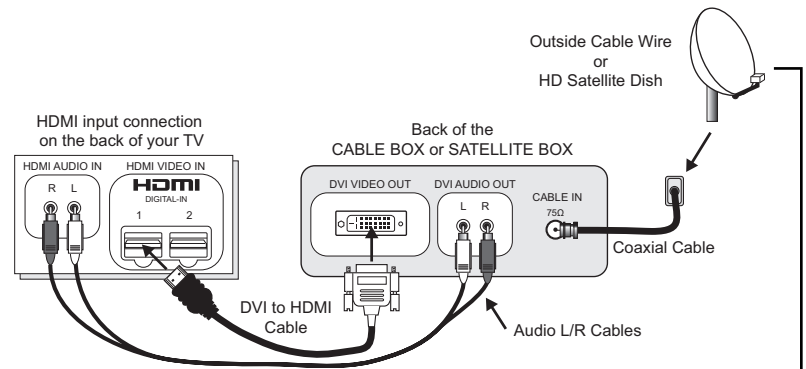

Connecting your TV to your HD Signal (continued...)

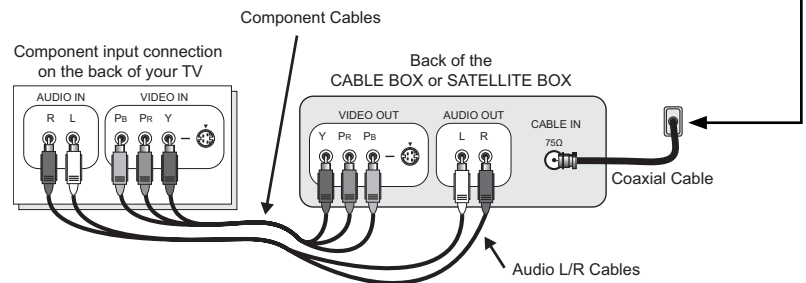

- 2 DVI to HDMI Cable and Audio L/R Cable connection** - This connection is better than method 1 if your HD Digital Cable Box or HD Digital Satellite Box has a DVI output and Audio L/R output.

Notes:

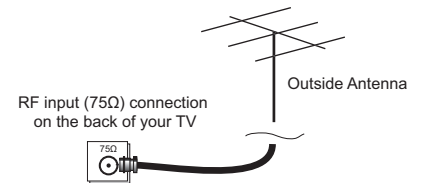

- Some Cable or Satellite Boxes may require additional connections to view other channels. Not all the channels are available via the HDMI connection.

- 3 Component Cable and Audio L/R Cable connection** - This connection is the most common if your HD Digital Cable Box or HD Digital Satellite Box has a Component and Audio L/R output.

- 4 Over-The-Air Antenna** - Simply connect your UHF antenna to the back of your TV.

General Note:

- Refer to your cable or satellite provider for more detailed information about their services and equipment.

Important Information Regarding the Lamp for your HD Television

- 1 Please connect your TV directly to the wall outlet to insure that it has a constant power supply which is needed to perform the lamp cool down process. If the TV loses power for whatever reason, it can't perform the lamp cool down process, which will significantly shorten the life expectancy of the lamp.
- 2 If the lamp replacement screen appears on your TV, it's time to prepare to replace the lamp. Before replacing the lamp you will need to purchase a replacement lamp unit, part number TS-CL110U. To purchase this lamp unit, call 1-800-252-5722, or go to www.jvcservice.com/store.
- 3 The lamp is a user replaceable item. Please refer to the "Lamp Replacement" section of your instruction manual.
- 4 The lamp contains a small amount of mercury. It must be recycled properly. The replacement lamp unit will contain all the necessary information on how to recycle it.
